Statistical Analysis and Predictive Modeling in Basketball Garvyn Jay Chua, 2023

The game of basketball has witnessed constant evolution necessitating the use of statistical data for predicting winners While the odds of winning a championship are traditionally 1 in 30 each year strategic positioning in various statistical categories can surpass this baseline regardless of a team s annual ranking By analyzing data and identifying crucial variables it

becomes evident that basketball outcomes are not predetermined This study employs modern data science methods to make predictions for future years or generations emphasizing the importance of selecting accurate via cross validation for the machine learning ML techniques All data used in this study is sourced from Basketball Reference This study debunks the fallacy that a team solely relying on prominent three point shooters guarantees championship success It underscores the significance of other factors and variables in determining outcomes The analysis emphasizes the importance of relying on objective statistical analysis rather than subjective perceptions Factors like overtime play and defensive prowess in blocks significantly impact a team's likelihood of becoming an NBA champion reinforcing the need for data driven insights and accurate predictions
