

STUDY GUIDE

PHARMACOLOGY

Pharmacology basics

Pharmacology is the scientific study of the origin, nature, chemistry, effects, and uses of drugs. This knowledge is essential to providing safe and accurate medication administration to your patients.

Basic concepts of Pharmacology:

- Pharmacokinetics – The **absorption, distribution, metabolism, and excretion** of drugs by the body.
- Pharmacodynamics – The **biochemical and physical effects** of drugs and the mechanisms of drugs by the body.
- Pharmacotherapeutics – **The use of drugs to prevent and treat diseases**

Naming and classifying drugs: Drugs have a specific kind of nomenclature – that is a drug can go by three different names.

- Chemical name- A **scientific name** that precisely describes the **drug's atomic and molecular structure**.
- Generic/Nonproprietary name - is **an abbreviation** of the chemical name.
- Trade name/proprietary name (Also known as brand name) – is **selected by the drug company** selling the product.
 - **Trade names are protected by copyright.**
 - ® symbol after a trade name indicates that **the name is registered by and restricted to the drug manufacturer.**

Class Act: Pharmacologic class (family) - Drugs that share the similar characteristics that are grouped together.

Beta-adrenergic blockers are an example of **pharmacologic class** – refers to how an agent works at the molecular, tissues, and body system levels.

Note: Pharmacologic class is a group of active moieties that share scientifically documented properties and is defined on the basis of any combination of three attributes of the active moiety

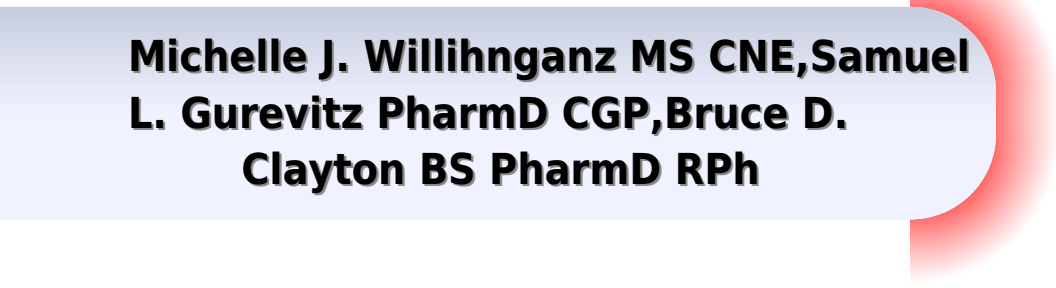

- **Mechanism of Action**
- **Physiologic effect**
- **Chemical structure**

A second type of drug grouping is **Therapeutic class** – categorizes drugs by the therapeutic use. *Anti-hypertensive* are an example of a therapeutic class.

Where drugs come from

Traditionally, drugs were derived from natural sources such as: Plants, Animals, Minerals. Today however laboratory knowledge, along with chemical science to develop synthetic drug sources. One advantage of chemically developed drugs is that they're free from the impurities in natural substances. Also, researchers and drug developers can manipulate the molecular structure of substances such as antibiotics so that a slight change in the chemical structure makes the drug effective against different organisms. The first, second, third, and fourth generation cephalosporins are an example.

web the signal spectrum can be also eliminated by using a frequency diversity receiver without affecting the profile of the beat noises as shown in figure 2 34 51 52 two optical filters namely bpf1 and bpf2 which are centered at different frequencies filter out the upper or lower sidebands of an optical signal respectively if bpf1 and bpf2 are well

[frequency spectrum an overview sciencedirect topics](#) - Jan 13 2023

web frequency spectrum of a signal is the range of frequencies contained by a signal for example a square wave is shown in fig 3 5a it can be represented by a series of sine waves $s(t) = \frac{4}{\pi} \sin 2\pi f_1 t - \frac{4}{3\pi} \sin 2\pi f_3 t + \frac{4}{5\pi} \sin 2\pi f_5 t$ having frequency components f_1 and f_3 and f_5 and amplitudes $\frac{4}{\pi}$

first upper limits on the 21 cm signal power spectrum from the - Mar 15 2023

web nov 9 2023 the redshifted 21 cm signal from neutral hydrogen is a direct probe of the physics of the early universe and has been an important science driver of many present and upcoming radio interferometers in this study we use a single night of observations with the new extension in nançay upgrading lofar nenufar to place upper limits on the 21

sketching the spectrum of a signal mathematics stack exchange - May 17 2023

web $h(f) = \frac{1}{2} \omega \cdot 200\pi$ the spectrum of $2g(t) \cos(200\pi t)$ is the original spectrum of $g(t)$ plus two copies of that spectrum shifted by 200π and -200π and scaled by $\frac{1}{2}$ as orion already points out in the comments this is the basic principle behind am modulation
