Greener Homes for the Future? Great Britain. Parliament. House of Commons. Environmental Audit Committee, 2008 This report examines three overarching issues the impact of the growth of house building targets what sort of homes should be built and where these homes should be built The Committee on Climate Change should assess the impact of the Government's new house building targets for three million new homes by 2020 on the UK's 2020 carbon reduction target In light of the latest economic projections fundamental changes in the mortgage market and falling house prices the Government should review the assumptions on which its target is based And the target for 2 million new homes to be built before the zero carbon target comes into effect in 2016 with a further 1 million to be built afterwards should change to increase significantly the proportion built afterwards Zero carbon homes must source their heat and power from renewable sources Ideally these will come from on site renewable power generation where this is impractical off site renewables should be built or funded The Government should ensure that an excess of land is not made available to developers something which is already leading to greenfield sites being developed in preference to brownfield sites The Government should urgently reintroduce a clear sequential test in favour of brownfield development into planning policy Greater emphasis ought to be placed on energy efficiency and sustainability within the building control regime that inspects new housing The Government should consider introducing higher penalties for developers who fail to meet energy efficiency standards The same environmental tests used for eco towns should be applied to all major housing developments from 2016 The Government should re-examine eco town proposals to ensure they have good public transport links and are located close to commercial centres and employment opportunities

Landslides and Climate Change: Challenges and Solutions Robin McInnes, Jenny Jakeways, Helen Fairbank, Emma Mathie, 2007-05-10 Investigates the relationship between landslides and climate change Considers proactive approaches to hazard and risk management combining geohazard modelling and prediction with effective risk management and informed planning policy as a means of safeguarding the sustainability of communities at risk

are most important This 2nd edition is now fully up to date with the latest Building Regulations Part L and F legislation England and Wales RIBA Plan of Work 2013 new information on the Green Deal and Zero Carbon and contains revised references and further reading sections throughout Whether used in the classroom office or on site the book guides the designer through the entire process from the fundamentals to the building details From future proofing for a changing climate to rainwater harvesting retrofit and zero carbon technologies the Pocketbook has got it covered

Parliamentary Debates (Hansard). Great Britain. Parliament. House of Commons,2010

Housing, the Environment, and Our Changing Climate Christoph Sinn,John Perry,2008 The climate is changing and this book aims to capture both ways in which this is true First the global warming which is taking place as our atmosphere is forced to absorb ever more man made carbon dioxide is now an indisputable reality It is not too late to prevent the worst effects of such climate change but in any event it will have a profound impact on the way we live and the kinds of houses we need Second the climate is changing albeit slowly in terms of the response by the housing world to the challenge of global warming Government has instigated a radical approach to environmental standards for new housing but has arguably been slower to realise the urgency of action to tackle poor environmental standards in the existing housing stock This completely new version of the earlier book *Housing and the Environment* A new agenda concentrates on the linked issues of climate change fuel shortages and fuel poverty

The Greening of America's Building Codes Aleksandra Jaeschke,2022-12-20 Environmental disasters and severe weather due to climate change both triggered by human actions have had an increasingly direct impact on our homes But the way in which America builds its homes is part of the problem This deeply researched history of sustainable design standards in building codes explores how public policy standard setting trade associations and financial incentives influence the ways in which the construction of our homes impacts the environment The Greening of America s Building Codes investigates the regulations and economic incentives meant to control the environmental impact of contemporary construction practices as it analyzes the history of residential building codes The book exposes how the socioeconomic and political forces that influenced early building code development continue to define the character of current building codes and by extension determine how we regulate environmental impact and define sustainability today More relevant than ever The Greening of America s Building Codes is a valuable tool for architects architecture students builders real estate developers and homeowners who want to understand how public policy and their own day to day decisions impact the environment

RIBA Journal ,2007-07 The Structural Engineer ,2006

Combating Climate Change National Assessment of UK Forestry and Climate Change Steering Group,2009 This assessment presents a science based analysis of the current and potential capabilities of the UK s forests and forest products to contribute to the mitigation of climate change It shows unequivocally that 1 a significant contribution to mitigation could

be made by maintaining and increasing the rates at which CO₂ is removed from the atmosphere by the UK's forests the abatement of emissions 2 there are other major contributions that forests and trees can make for example in urban environments and 3 that there are areas where substantial research is required to assess and reduce impacts and to develop the contribution of UK forestry to the mitigation of and adaptation to climate change The report follows the IPCC convention of identifying key findings at the start of each chapter Authors have also identified research priorities at the end of their respective chapters and these proposals require serious and urgent consideration Gaps in understanding are identified and in some instances there is a clear requirement for more scientific evidence in order that uncertainties in the projected impacts of climate change can be reduced The driver in the new research programmes will be the need to enhance the contribution that UK trees and woodlands can make to a low carbon economy It is the expressed intention of the report to provide the detailed evidence required to achieve sustainable forest management under what will be complex and changing climatic circumstances
