

The diagram illustrates that classroom instruction is the result of teacher decision-making in real time. These decisions are assumed to derive from a number of sources: teacher knowledge and beliefs, and teacher assessment of student knowledge. The latter are generated when teachers carefully observe (and interpret) their students' mathematical behaviours and the mathematics artefacts that result from those behaviours.

Key features

Fennema *et al.* argue that the main features or tenets of CGI are: '(1) instruction must be based on what each learner knows, (2) instruction should take into consideration how children's mathematical ideas develop naturally, and (3) children must be mentally active as they learn mathematics' (1989, p. 203).
