

Bird Beak Adaptation Lab

Introduction

An adaptation is a characteristic that helps a plant or animal survive in its environment. Bird beaks have adapted for many things such as eating, defense, feeding young, gathering nesting materials, building nests, scratching, courting and attacking. The size and shape a beak is specific for the type of food the bird gathers. For example, Some birds have heavy thick bills used to crack seeds, and hummingbirds have thin bills to sip nectar.

In this lab, we will model bird beaks and bird food. We will use the models to recreate how a bird eats, and construct an idea about how the shape of a bird beak is related to its prey.

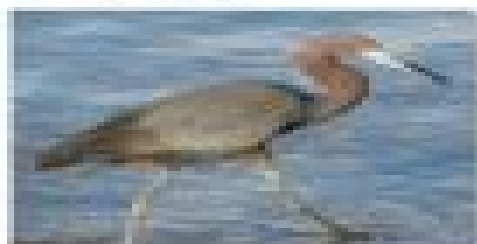

Question

How does the shape of a bird beak relate to the prey of the bird?

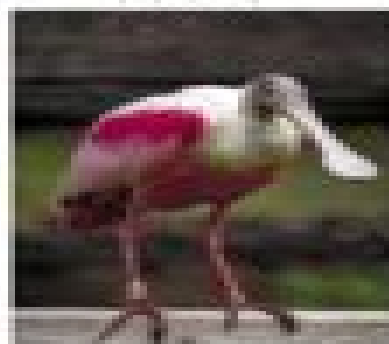

Hypothesis

Match the bird/beak model to the prey model. Draw a line to connect the food to the bird you think...

Heron
(scissors)

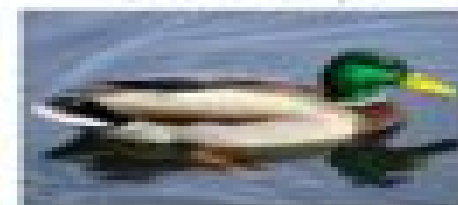

Spoonbill Bird
(Spoon)

Cardinal
(Clothes Clip)

Duck
(Craft Stick)

toothpick = small insects

rubber band = worms
(or string)

straws = small fish/small

beads = seeds

Materials

• Pan	• Cup or Beaker	• Scissors	• Spoon
• Craft stick	• Clothes Clip	• Rubber bands	• Beads
• Straw	• Toothpick
