Idea Engineering La Verne Abe Harris, 2014-01-03 Engineers and technologists often operate from a worldview of ones and zeros. The mission of this book is to interject the colorful world of creative thinking to help engineers and technologists learn to think and work differently. Thus, idea engineering becomes the driving force transforming engineers and technologists into innovators and entrepreneurs using case studies and anecdotes from first-hand experience. The material in this book is organized to take the reader through basic concepts and techniques of creative thinking and innovation to better solve engineering and technological challenges. It provides an overall understanding of who, what, why, when, and how idea engineering can transform an individual and a company to formulate and apply the best possibilities. The target audience is university-level students and practitioners, especially upper-division undergraduates and graduate students in engineering education, industrial engineering, engineering technology, science, and technology, and then engineering practitioners from an engineering technology or science background. It can be purchased individually as a text, professional trade, or reference title or accessed within a collection. Libraries and professional organizations would buy. In addition, the material in this book can supplement coursework in business communication management and applied creative arts. As a core or supplemental text, it would make a great foundation for a one-credit course or a part of any three-credit capstone design course or seminar stressing creative thinking and innovation. It would also be a good overview for any layman interested in learning about creative thinking and innovation.

Tutorial Donald J. Reifer, 1979 This tutorial is to provide the materials for a basic understanding of the theories, tools, techniques, and skills of software management. Preface Artificial Intelligence, Co-Creation and Creativity Francisco Tigre Moura, 2024-08-01 Artificial intelligence (AI) has deeply impacted our understanding of creativity and the human ability to generate creative outputs. New applications for creative tasks are rapidly evolving, and new tools are constantly being developed with much greater optimal capabilities. Importantly, the success of implementing such tools for creative tasks is still heavily dependent on human supervision and input. Therefore, it is vital to understand and critically reflect on the nature of co-creative processes between humans and AI. This book addresses such issues and provides insights into how humans can augment their capabilities for generating creative and innovative outputs by successfully co-creating with AI. The book is intentionally divided into three main parts to allow for a comprehensive and holistic perspective on human and AI co-creation for creative tasks. The sections are divided as follows: Part 1: Principles of AI and Creativity; Part 2: Critical Issues on Artificial Co-Creation; and Part 3: Industry-Specific Discussions. Consequently, the book provides a holistic insight on the topic, covering various issues and perspectives, and enabling an accessible read to a broad audience. For example, chapters cover examples across different industry sectors, including music, arts, science, and management. Furthermore, the book covers critical questions involving copyrights, ethical concerns, relationship with algorithms, and context-based issues. Only by critically reflecting on the intrinsic issues of AI and learning how to work with it

effectively for creative purposes will we be able to benefit from its full potential to augment human creative abilities in an appropriate manner This novel edited collection is an essential read for scholars working on the intersection of AI creativity arts and management

BUILDING A SPORTSCAR EXTERIOR TO CLASS-A SURFACING STANDARDS TUTORIAL

Serdar Hakan DÜZGÖREN, PREFACE INTRODUCTION TO CLASS A SURFACING Class A surfacing is to produce mathematical surfaces to the most exacting standard Once completed the A Class surface is the final output of styling design These surfaces are the Master for making the tools that produces the product itself Class A surfacing is one of the most complex and tedious 3D computer modeling tasks you can do Class A surface development occurs in the final phase of a project when constraints are much tighter to adhere to Modeling under these conditions is very hard without adoption of certain surface basics rules 3D computer modeling is still based on the knowledge and skill set of the individual user Therefore productivity and surface quality is user dependent The surfacing task can begin from the scan of a physical model as in this tutorial but it can also start from 2D sketch or verbal input In most cases it is the continuation of a concept 3D digital model Most of the time you will also need to be aware of and include flanges draft angles tool split lines and other engineering constraints In the tutorial these are not included To include them would put even more constraints on the modeling surfacing itself This tutorial demonstrates only one small part of class A surfacing but a very important element of creating good quality surfaces When you are starting a project or a part always take some time to think how you will build this before you start It is not a good idea to rush in the beginning of a project To be successful and to achieve that right quality in the time given you need a strategy Without this you can find yourself in a corner from which you can never escape a dead end These points below are in my opinion the most important basic rules to succeed It is very important to have a strategy on methodology surface layout and surface construction Always try to build the surfaces to allow easy modification Keep the surfaces as simple as possible Always try to build to an intersection By following these basic rules you have come a long way to succeeding in your modeling Good luck
