MorphOS - user's manual - Volume One Adam Zalepa, The book concerns the operation and the extensive configuration options of the MorphOS operating system It is software derived from the Commodore Amiga computer that runs on computers with PowerPC CPUs including Apple machines

Write Great Code, Volume 1, 2nd Edition Randall Hyde, 2020-08-04 Understanding the Machine the first volume in the landmark Write Great Code series by Randall Hyde explains the underlying mechanics of how a computer works This the first volume in Randall Hyde s Write Great Code series dives into machine organization without the extra overhead of learning assembly language programming Written for high level language programmers Understanding the Machine fills in the low level details of machine organization that are often left out of computer science and engineering courses Learn How the machine represents numbers strings and high level data structures so you ll know the inherent cost of using them How to organize your data so the machine can access it efficiently How the CPU operates so you can write code that works the way the machine does How I O devices operate so you can maximize your application s performance when accessing those devices How to best use the memory hierarchy to produce the fastest possible programs Great code is efficient code But before you can write truly efficient code you must understand how computer systems execute programs and how abstractions in programming languages map to the machine s low level hardware After all compilers don t write the best machine code programmers do This book gives you the foundation upon which all great software is built NEW IN THIS EDITION COVERAGE OF Programming languages like Swift and Java Code generation on modern 64 bit CPUs ARM processors on mobile phones and tablets Newer peripheral devices Larger memory systems and large scale SSDs

Programming the Cell Processor Matthew Scarpino, 2008-10-14 Make the Most of IBM s Breakthrough Cell Processor in Any Gaming Graphics or Scientific Application IBM s Cell processor delivers truly stunning computational power enough to satisfy even the most demanding gamers and graphics developers That s why Sony chose the Cell to drive its breakthrough PlayStation 3 and why Cell processors are at the heart of today s most powerful supercomputers But many developers have struggled to create high performance Cell applications the practical coherent information they need simply hasn t existed Programming the Cell Processor solves that problem once and for all Whether you re a game developer graphics programmer or engineer Matthew Scarpino shows you how to create applications that leverage all the Cell s extraordinary power Scarpino covers everything from the Cell s advanced architecture to its powerful tools and libraries presenting realistic code examples that help you gain an increasingly deep and intuitive understanding of Cell development Scarpino illuminates each of the Cell s most important technical innovations introduces the commands needed to access its power and walks you through the entire development process including compiling linking debugging and simulating code He also offers start to finish case studies for three especially important Cell applications games graphics and scientific computing The Cell platform offers unprecedented potential and this book will help you make the most of it

Cryptographic Hardware and Embedded Systems - CHES 2001 Cetin K. Koc, David Naccache, Christof Paar, 2003-06-30

These are the proceedings of CHES 2001 the third Workshop on Cryptographic Hardware and Embedded Systems The first two CHES Workshops were held in Massachusetts and this was the first Workshop to be held in Europe There was a large number of submissions this year and in response the technical program was extended to 2 1/2 days As is evident by the papers in these proceedings many excellent submissions were made Selecting the papers for this year's CHES was not an easy task and we regret that we had to reject several very interesting papers due to the lack of time There were 66 submitted contributions this year of which 31 or 47% were selected for presentation If we look at the number of submitted papers at CHES 99 42 papers and CHES 2001 51 papers we observe a steady increase We interpret this as a continuing need for a workshop series which combines theory and practice for integrating strong security features into modern communications and computer applications In addition to the submitted contributions Ross Anderson from Cambridge University UK and Adi Shamir from The Weizmann Institute Israel gave invited talks As in previous years the focus of the workshop is on all aspects of cryptographic hardware and embedded system design Of special interest were contributions that describe new methods for efficient hardware implementations and high speed software for embedded systems e.g. smart cards microprocessors DSPs etc CHES also continues to be an important forum for new theoretical and practical findings in the important and growing field of side channel attacks

Correct Hardware Design and Verification Methods Laurence Pierre, Thomas Kropf, 2003-07-31

CHARME 99 is the tenth in a series of working conferences devoted to the development and use of leading edge formal techniques and tools for the design and verification of hardware and systems Previous conferences have been held in Darmstadt 1984 Edinburgh 1985 Grenoble 1986 Glasgow 1988 Leuven 1989 Torino 1991 Arles 1993 Frankfurt 1995 and Montreal 1997 This workshop and conference series has been organized in cooperation with IFIP WG 10.5 It is now the biannual counterpart of FMCAD which takes place every even numbered year in the USA The 1999 event took place in Bad Herrenalb a resort village located in the Black Forest close to the city of Karlsruhe The validation of functional and timing behavior is a major bottleneck in current VLSI design systems A predominantly academic area of study until a few years ago formal design and verification techniques are now migrating into industrial use The aim of CHARME 99 is to bring together researchers and users from academia and industry working in this active area of research Two invited talks illustrate major current trends the presentation by Gerard Berry Ecole des Mines de Paris Sophia Antipolis France is concerned with the use of synchronous languages in circuit design and the talk given by Peter Jansen BMW Munich Germany demonstrates an application of formal methods in an industrial environment The program also includes 20 regular presentations and 12 short presentations poster exhibitions that have been selected from the 48 submitted papers
