## ABSTRACT

Adolescent have higher tendency to experience peer pressure in school. Peer pressure is clustered in four categories such as social belongingness, curiosity, cultural-parenting orientation of parents and education, this research design used is descriptive correlation. The researchers conducted the survey among the students in the Senior High School. With 96 respondents who completed the survey. Quantitative data were processed by using chi-square. The result would show the correlation between the perceived level of peer pressure in terms of social belongingness, curiosity, cultural-parenting orientation of parents and education. Generally, students are expected to face the effects of peer pressure optimistically to cope up the negative impact of peer pressure in their studies. Students may use positive or negative approach towards peer pressure. Teacher may guide and help them in facing the problems.

**Keywords:** Cultural-Parenting Orientation, Curiosity, Peer Pressure, Social Belongingness

## 1. Rationale / Introduction

Peer pressure is often seen during the adolescence stage of a teenagers because they often seek comfort among their peers and intend to do what their peers does without knowing if it is good or bad for them. Adolescence is a period of an individual that is transitory when a child reaches the point in changing its childhood to adulthood (Adeniyi & Kolawole, 2015). Thus individuals are prone temptations in the social contextualization concepts, for example, socializing with others tend to do some activities such as napping and drinking during classes or work day ( Bonet & Denont- Boemont, 2013).

Adolescence social environment could affect teenagers in their adolescence, because mostly in this period teenagers tend to communicate more by their peers. As children grow and reach adolescence, teenagers become more dependent with their peers than their family especially in making choices and enhancing their moral values in life (Uslu, 2013).

Human development is affected by its socialization with other people in the environment. Specifically the academic achievements of students are conjectured to be correlational by the support given by the parents, the teachers and the peer of teenagers that affect their level of academic performance (Chen, 2008). In general teenagers spend more time with peers. Peer pressure is described to have a positive and negative impact among individuals and even without effect to a person because peer pressure is a continuous learning (Gulati, 2017).

Peer pressure often seems to have various effects toward the student academic performance in school. It is how their peers affect them whether in a positive or negative way. Teenagers need to seek comfort from others that they found in the presence of their peers, and they are not even aware on how their peers influence them academically.

Eventually this study aimed to know the relationship of peer pressure the Senior High School Students and their academic performance.
