[Estimating and Tendering for Construction Work](#) Martin Brook,2016-12-08 Estimators need to understand the consequences of entering into a contract often defined by complex conditions and documents as well as to appreciate the technical requirements of the project Estimating and Tendering for Construction Work 5th edition explains the job of the estimator through every stage from early cost studies to the creation of budgets for successful tenders This new edition reflects recent developments in the field and covers new tendering and procurement methods the move from basic estimating to cost planning and the greater emphasis placed on partnering and collaborative working the New Rules of Measurement NRM1 and 2 and examines ways in which practicing estimators are implementing the guidance emerging technologies such as BIM Building Information Modelling and estimating systems which can interact with 3D design models With the majority of projects procured using design and build

contracts this edition explains the contractor's role in setting costs and design statements to inform and control the development of a project's design. Clearly written and illustrated with examples, notes and technical documentation, this book is ideal for students on construction-related courses at HNC, HND and Degree levels. It is also an important source for associated professions and estimators at the outset of their careers.

Managing Measurement Risk in Building and Civil Engineering Peter Williams, 2015-11-16

Measurement in civil engineering and building is a core skill and the means by which an architectural or engineering design may be modelled financially, providing the framework to control and realise designs within defined cost parameters to the satisfaction of the client. Measurement has a particular skill base but it is elevated to an art because the quantity surveyor is frequently called upon to interpret incomplete designs in order to determine the intentions of the designer so that contractors may be fully informed when compiling their tenders. Managing Measurement Risk in Building and Civil Engineering will help all those who use measurement in their work or deal with the output from the measurement process to understand not only the ins and outs of measuring construction work but also the relationship that measurement has with contracts, procurement, claims and post-contract control in construction. The book is for quantity surveyors, engineers and building surveyors but also for site engineers required to record and measure events on site with a view to establishing entitlement to variations, extras and contractual claims. The book focuses on the various practical uses of measurement in a day-to-day construction context and provides guidance on how to apply quantity surveying conventions in the many different circumstances encountered in practice. A strong emphasis is placed on measurement in a risk management context as opposed to simply taking off quantities. It also explains how to use the various standard methods of measurement in a practical working environment and links methods of measurement with conditions of contract encompassing the contractual issues connected with a variety of procurement methodologies. At the same time, the many uses and applications of measurement are recognised in both a main contractor and subcontractor context. Measurement has moved into a new and exciting era of on-screen quantification and BIM models but this has changed nothing in terms of the basic principles underlying measurement: thoroughness, attention to detail, good organisation, making work auditable and above all, understanding the way building and engineering projects are designed and built. This book will help to give you the confidence to both measure and understand measurement risk issues by presenting the subject of measurement in a modern context with a risk management emphasis, recognising the interrelationship of measurement with contractual issues including identification of pre and post-contract measurement risk issues, emphasising the role of measurement in the entirety of the contracting process, particularly considering measurement risk implications of both formal and informal tender documentation and common methods of procurement, conveying the basic principles of measurement and putting them in an IT context, incorporating detailed coverage of NRM1 and NRM2, CESMM4, Manual of Contract Documents for Highway Works and POM I including a comparison of NRM2 with SMM7 and a detailed analysis of changes from CESMM3 to CESMM4.

discussing the measurement implications of major main and sub contract conditions JCT NEC3 Infrastructure Conditions and FIDIC providing detailed worked examples and explanations of computer based measurement using a variety of industry standard software packages      CESMM4 Revised Mike Attridge,2020-09
