F. Ward,1989 Institute Irrigation Studies 25 jaar      *Optimization Models Using Fuzzy Sets and Possibility Theory* J. Kacprzyk,S.A. Orlovski,2013-11-11 Optimization is of central concern to a number of disciplines Operations Research and Decision Theory are often considered to be identical with optimization But also in other areas such as engineering design regional policy logistics and many others the search for optimal solutions is one of the prime goals The methods and models which have been used over the last decades in these areas have primarily been hard or crisp i.e. the solutions were considered to be either feasible or unfeasible either above a certain aspiration level or below This dichotomous structure of methods very often forced

the modeller to approximate real problem situations of the more or less type by yes or no type models the solutions of which might turn out not to be the solutions to the real problems This is particularly true if the problem under consideration includes vaguely defined relationships human evaluations uncertainty due to inconsistent or incomplete evidence if natural language has to be modelled or if state variables can only be described approximately Until recently everything which was not known with certainty i.e. which was not known to be either true or false or which was not known to either happen with certainty or to be impossible to occur was modelled by means of probabilities This holds in particular for uncertainties concerning the occurrence of events
