#### **Repair Guide for**

**Large Area Composite Structure Repair** J. D. Labor, R. W. Kiger, A. L. Scow, S. H. Myhre, A. Hall, NORTHROP CORP

HAWTHORNE CA AIRCRAFT GROUP.,1979 This repair guide presents recommended procedures for the repair of large damage areas on graphite epoxy panels The procedures were developed during a program in which repairs were analysed designed and tested to verify their strength and durability Both engineering design information and specific step by step shop procedures are given The recommended repair configuration uses a scarf joint machined into the parent panel as the damaged material is removed Repair plies of prepreg are stepped to fit the scarfed surface and made to extend slightly beyond the end of the scarf leaving an essentially flush surface The repair plies are cocured in place with a layer of film adhesive An alternate repair is shown using a precured external patch which may be simpler to install in some cases although at the expense of aerodynamic smoothness and with some loss in strength The procedures in this repair guide are intended to supplement but not replace instructions given for the repair of specific aircraft as given in technical orders or otherwise specified by the manufacturer of the aircraft Author     *A Collection of Technical Materials* ,1982     Advances in Experimental Mechanics IV Janice M. Dulieu-Barton,Simon Quinn,2006-08-15 Proceedings of the 4th International Conference on Advances in Experimental Mechanics University of Southampton 6th 8th September 2005     **Numerical Analysis and Modelling of Composite Materials** J.W. Bull,1996 Composite materials are increasingly used in many applications because they offer the engineer a range of advantages over traditional materials They are often used in situations where a specified level of performance is required but where the cost of testing the materials under the extremes of those specifications is very high In order to solve this problem engineers are turning to computer Modelling to evaluate the materials under the range of conditions they are likely to encounter Many of these analyses are carried out in isolation and yet the evaluation of a range of composites can be carried out using the same basic principles In this new book the editor has brought together an international panel of authors each of whom is working on the analysis and Modelling of composite materials The overage of the book is deliberately wide to illustrate that similar principles and methods can be used to model and evaluate a wide range of materials It is also hoped that by bringing together this range of topics the insight gained in the study of one composite can be recognized and utilized in the study of others Professional engineers involved in the specification and testing of composite material structures will find this book an invaluable resource in the course of their work It will also be of interest to those industrial and academic engineers involved in the design development manufacture and applications of composite materials     **Development of Probabilistic Design Methodology for Composite Structures** P. M. Gary,1997 This program was conducted by Vought Aircraft Company Dallas Texas to perform technical studies to aid in the development of a probabilistic design methodology The foundation of the probabilistic design approach applied to composite structure is to base design criteria and objectives on reliability targets instead of factors of safety Control of the process in terms of how much it differs from the traditional approach is maintained by the Probability of Structural Failure The key technical issues addressed in this contract were the overall assessment of the accuracy of the

methodology current reliability experience definition of appropriate goals and database development The overall assessment of the accuracy of the methodology was done by reviewing current published documents and papers in the probabilistic design field This review focused on similarities and differences between approaches The database development was done by visiting airline maintenance depots and naval aviation depots to collect data on structural failures The analyses of such data produced historical values for aircraft structural reliability Current structural reliability issues and reliability goals were addressed by analyzing the wing box of the Lear Fan aircraft using Vought s Probabilistic Design Model Measures of structural reliability such as single flight hour probability of failure for the whole wing box including upper skin lower skin and substructure were produced      *Proceedings* International Technical Communications Conference,1980      A Study of the Utilization of Advanced Composites in Fuselage Structures of Commercial Aircraft ,1985
