Computer Concepts 2chapter 8:

The Principles of Business Computing M. G. Eccles, F. W. Julyan, G. Boot, J. P. Van Belle, 2000-01-31 Written by four prominent academics this is one of South Africa's best selling computer books. It was written specifically for those managing or using computers for the first time be they accountants lawyers or other business people. It is also an ideal introduction to business computing for the commerce student.

New Perspectives [on] Computer Concepts June Jamrich Parsons, Dan Oja, 2007-03 Engage, excite and enlighten your students with The New Perspectives on Computer Concepts Tenth Edition. This book has been completely updated to provide your students with the latest most in depth information on both computer concepts and the context in which they fit into today's world. The Tenth Edition provides the most current information on computers software the Internet and emerging issues and technologies. The New Perspectives unique approach transforms learning concepts into a more approachable hands on experience that appeals to anyone from the computer novice to computer savvy learners.

Once Upon an Algorithm Martin Erwig, 2017-08-18 This easy to follow introduction to computer science reveals how familiar stories like Hansel and Gretel Sherlock Holmes and Harry Potter illustrate the concepts and everyday relevance of computing. Picture a computer scientist staring at a screen and clicking away frantically on a keyboard hacking into a system or perhaps developing an app. Now delete that picture. In *Once Upon an Algorithm* Martin Erwig explains computation as something that takes place beyond electronic computers and computer science as the study of systematic problem solving. Erwig points out that many daily activities involve problem solving. Getting up in the morning for example. You get up take a shower get dressed eat breakfast. This simple daily routine solves a recurring problem through a series of well defined steps. In computer science such a routine is called an algorithm. Erwig illustrates a series of concepts in computing with examples from daily life and familiar stories. Hansel and Gretel for example execute an algorithm to get home from the forest. The movie *Groundhog Day* illustrates the problem of unsolvability. Sherlock Holmes manipulates data structures when solving a crime. The magic in Harry Potter's world is understood through types and abstraction and Indiana Jones demonstrates the complexity of searching. Along the way Erwig also discusses representations and different ways to organize data intractable problems language syntax and ambiguity control structures loops and the halting problem different forms of recursion and rules for finding errors in algorithms. This engaging book explains computation accessibly and shows its relevance to daily life. Something to think about next time we execute the algorithm of getting up in the morning.
