Bassett,2007-02-15 Except for one area of gene expression control plant research has significantly fallen behind studies in insects and vertebrates The advances made in animal gene expression control have benefited plant research as we continue to find that much of the machinery and mechanisms controlling gene expression have been preserved in all eukaryotes Through comparison we have learned that certain aspects of gene regulation are shared by plants and animals i e both contain introns separating the coding regions of most genes and both utilize similar machinery to process the introns to form mature mRNAs Yet there are some interesting differences in gene structure and regulation between plants and animals For example unlike animal genes plant genes are generally much smaller with fewer and smaller introns Regulation of Gene Expression in Plants presents some of the most recent novel and fascinating examples of transcriptional and posttranscriptional control of gene expression in plants and where appropriate provides comparison to notable examples of animal gene regulation **Control of Gene Expression** Norman Maclean,1976 The control of gene expression and its levels of action Gene expression in prokaryotes Experimental systems of differential gene function in eukaryotes systems involving one type of protein Experimental systems of differential gene function in eukaryotes systems of limited complexity Experimental systems of differential gene function in eukaryotes systems not well understood in molecular terms RNA involvement in gene expression General concepts of gene regulation Gene Silencing in Higher Plants and Related Phenomena in Other Eukaryotes Peter Meyer,2012-12-06 In recent years several different gene silencing phenomena have been discovered in plants The book summarizes the most recent data on gene silencing phenomena such as trans inactivation paramutation and co suppression Plant researchers will find this edition a valuable help in differentiating between a number of puzzling and partly contradictory gene silencing events Those not familiar with plant molecular biology are introduced into the relevant methods and scientific models In addition examples and models of gene silencing in filamentous fungi Drosophila and mammalian systems are presented By providing a comparative update on gene silencing effects in different eukaryotes this book should stimulate communication among scientists working in diverse areas of eukaryotic gene regulation *Regulation of Transcription and Translation in Eukaryotes* Ekkehard K.F. Bautz,P. Karlson,H. Kersten,2012-12-06 This volume represents the proceedings of the 24th Mosbach Colloquium on Regulation of Transcription and Translation in Eukaryotes which was held April 26-28 1973 in Mosbach Germany under the auspices of the Gesellschaft für Biologische Chemie To the three of us H KERSTEN P KARLSON and myself who were commissioned with the invitation of speakers it was a difficult decision as to whether we should attempt to

cover with some twenty contributions as many aspects of this broad topic as possible or to sacrifice the intellectually perhaps more pleasing but more speculative concepts and to concentrate on a few aspects of gene expression in reasonable detail We unanimously decided on the latter course leaving such important and timely topics as for example hormone action cyclic AMP and reverse transcription to the proceedings of other symposia and concentrating on the four questions which are most basic to an understanding of the mechanisms of transcription and translation and for which fragmentary but nonetheless reliable experimental results have become available within the last few years These are the structure of chromatin the synthesis of messenger RNA the structure of the active ribosome and the role of initiation factors in protein synthesis

Changes in Eukaryotic Gene Expression in Response to Environmental Stress Burr Atkinson, 2012-12-02 Changes in Eukaryotic Gene Expression in Response to Environmental Stress focuses on various aspects of eukaryotic cells response to heat stress shock and other stress stimuli This book is organized into two major sections encompassing 17 chapters that reflect the emphasis on research utilizing *Drosophila* a variety of animal systems and plants This book first provides a brief introduction to the organization sequences and induction of heat shock proteins and related genes It then describes the control of transcription during heat shock from the standpoint of molecular biology and evolutionary variations of the mechanisms in organisms with diverse metabolic needs It goes on to discuss the issue of coordinate and noncoordinate responses of heat shock genes It presents a model for post transcriptional regulation on certain aspects of coordinate and noncoordinate regulations Chapters 6-12 discuss heat shock proteins and genes and the effects of stress on gene expression of sea urchin avian and mammalian cells The second part of the book focuses on the physiological role of heat shock proteins and genes in plants and fungi It includes a discussion on experimental problems encountered during studies of the mechanisms of inhibition of photosynthesis by unfavorable environmental conditions The changes in transcription and translation of specific mRNAs in the developing embryo during heat shock at various temperatures are described The concluding chapters deal with heat shock response in plants particularly the response in soybeans and maize covering both physiological and molecular analyses Research scientists clinicians and agriculturists will greatly benefit from the information presented in this book *Transcription Factors in Eukaryotes* Athanasios G. Papavassiliou, 1997-01-01

Transcription factors are central to the process of eukaryotic gene control These proteins influence the basal level of gene expression in a cell and can modulate genetic programs by activating or repressing the transcription of particular genes in a cell type specific or inducible manner This book provides a state of the art overview of the wide gamut of cellular and viral transcription factors with emphasis on structure function interrelations in the context of the nuclear environment their modes of action in signal dependent and tissue specific gene regulation and their involvement in various aspects of growth differentiation and tumorigenesis antioncogenesis

Study in the Health Sciences,1974 Regulation of Gene Expression in Eukaryotic Cells - a Symposium Fogarty International Center,1974 Transfer and Expression of Eukaryotic Genes Harold S. Ginsberg, Henry James Vogel,1984

Transfer and Expression of Eukaryotic Genes documents the progress in our understanding of the transfer and expression of eukaryotic genes This book covers topics organized around three themes gene expression and its regulation in vivo gene transfer and development and viral gene and oncogene systems This text is divided into three sections encompassing 25 chapters and begins with an overview of the molecular basis of gene expression with emphasis on transcription complexes that account for transcription control in eukaryotic genes It then turns to experiments that assess the in vitro s

Regulation of Transcription and Translation in Eukaryotes Ekkehard K.F. Bautz,P. Karlson,H. Kersten,1973-12-27 This volume represents the proceedings of the 24th Mosbach Colloquium on Regulation of Transcription and Translation in Eukaryotes which was held April 26-28 1973 in Mosbach Germany under the auspices of the Gesellschaft für Biologische Chemie To the three of us H KERSTEN P KARLSON and myself who were commissioned with the invitation of speakers it was a difficult decision as to whether we should attempt to cover with some twenty contributions as many aspects of this broad topic as possible or to sacrifice the intellectually perhaps more pleasing but more speculative concepts and to concentrate on a few aspects of gene expression in reasonable detail We unanimously decided on the latter course leaving such important and timely topics as for example hormone action cyclic AMP and reverse transcription to the proceedings of other symposia and concentrating on the four questions which are most basic to an understanding of the mechanisms of transcription and translation and for which fragmentary but nonetheless reliable experimental results have become available within the last few years These are the structure of chromatin the synthesis of messenger RNA the structure of the active ribosome and the role of initiation factors in protein synthesis

Post-transcriptional Control of Gene Expression Orna Resnekov,Alexander von Gabain,2011-09-22 Many important cellular processes rely on posttranscriptional control of gene expression This book describes the mechanisms of gene expression at this level that occur in the cytoplasm of prokaryotes and eukaryotes Several introductory chapters discuss the general principles of translation and mRNA stability The interactions of mature mRNA with the translational machinery the components of mRNA degradation and antisense RNA are surveyed Subsequent chapters discuss protein folding transport modification and degradation The book is an invaluable source of information for both newcomers and those wishing an overview of the field

Translational Regulation of Gene Expression 2 J. Ilan,2011-10-12 This book which results from the dramatic increase in interest in the control mechanism employed in gene expression and the importance of the regulated

proteins presents new information not covered in Translational Regulation of Gene Expression which was published in 1987. It is not a revision of the earlier book but rather an extension of that volume with special emphasis on mechanisms. As the reader will discover there is enormous diversity in the systems employing genes for translational regulation in order to regulate the appearance of the final product the protein. Thus we find that important proteins such as protooncogenes, growth factors, stress proteins, cytokines, lymphokines, iron storage and iron uptake proteins, and a panorama of prokaryotic proteins as well as eukaryotic viral proteins are translationally regulated. Since for some gene products the degree of control is greater by a few orders of magnitude than their transcription we can state that for these genes at least the expression is translationally controlled. Translational regulation of gene expression in eukaryotes has emerged in the last few years as a major research field. The present book describes mechanisms of translational regulation in bacteria, yeast, and eukaryotic viruses as well as in eukaryotic genes. In this book we try to provide in depth coverage by including important examples from each group rather than systematically including all additional systems not described in the previous volume.
