I wasn't a very motivated student when I was younger, so I failed my exams in 1999 and had to retake them the following summer. I'd already decided I wanted to take a gap year then go to business school, so this time I completed all the coursework and revised thoroughly; I passed easily. I spent a year abroad as an assistant in a secondary school and then went to business school – I'd already applied and successfully attended an interview before revisiting my exams.
In my second year as an undergraduate, I spent a semester as an intern at Hewlett Packard, which was very rewarding. In fact, I went straight into a job at HP after I graduated the following June. They encouraged me to do a Master's degree by correspondence – I just have to finish writing a dissertation. I need a break now, but I may take a sabbatical to study for an MBA in a few years' time.

Based on 40 years of experience, *Integrated Environmental Management: A Transdisciplinary Approach* brings together many ecological and technological tool boxes and applies them in a transdisciplinary method. The book demonstrates how to combine continuous improvement management tools and principles with proven environmental assessment methodologies. This integrated ecological and environmental management approach lets you view environmental problems from a holistic angle, considering the ecosystem as an entity as well as the entire spectrum of solutions and possible combinations of solutions. The book discusses the importance of examining all facets or possible problems associated with an ecosystem simultaneously and evaluating all the solution possibilities proposed by the relevant disciplines at the same time. The authors underline that there is no alternative to integrated multidisciplinary ecological environmental management at least not on a long term basis. They lay down the fundamental concepts in an applications oriented manner that allows you to apply the seven steps of environmental management directly. However, the book goes beyond delineating the available tool boxes; it also details how they can be integrated and combined to find an optimum solution to ecological environmental problems.
