Chipless RFID Systems Using Advanced Artificial Intelligence Larry M. Arjomandi, Nemai Chandra

Karmakar, 2023-01-31 This book shows you how to develop a hybrid mm wave chipless Radio Frequency Identification RFID system which includes chip less tag reader hardware and detection algorithm that use image processing and machine learning ML techniques It provides the background and information you need to apply the concepts of AI into detection and chip less tag signature printable on normal plastic substrates instead of the conventional peak nulls in the frequency tags You ll learn how to incorporate new AI detection techniques along with cloud computing to lower costs You ll also be shown a cost effective means of image construction which can lower detection errors The book focuses on side looking aperture radar SLAR with a combination of deep learning to provide a much safer means of chipless detection than the current iSAR technique Each chapter includes practical examples of design With its emphasis on mm waveband and the practical side of design and engineering of the chipless tags reader and detection algorithms this is an excellent resource for industry engineers design engineers and university researchers Introduction to Mixed-Signal, Embedded Design Alex

Doboli, Edward H. Currie, 2010-12-17 This textbook is written for junior senior undergraduate and first year graduate students in the electrical and computer engineering departments Using PSoC mixed signal array design the authors define the characteristics of embedd design embedded mixed signal architectures and top down design Optimized implementations of these designs are included to illustrate the theory Exercises are provided at the end of each chapter for practice Topics covered include the hardware and software used to implement analog and digital interfaces various filter structures amplifiers and other signal conditioning circuits pulse width modulators timers and data structures for handling multiple similar peripheral devices The practical exercises contained in the companion laboratory manual which was co authored by Cypress Staff Applications Engineer Dave Van Ess are also based on PSoC PSoC s integrated microcontroller highly configurable analog digital peripherals and a full set of development tools make it an ideal learning tool for developing mixed signal embedded design skills *Building Embedded Systems* Changyi Gu, 2016-05-26 Develop the software and hardware

Two-level Adaptive Branch Prediction and Instruction Fetch Mechanisms for High Performance Superscalar Processors Tse-Yu Yeh,1993 Abstract As the issue width and depth of pipelining of high performance superscalar processors increase the importance of an effective instruction fetch mechanism becomes vital to delivering the potential performance of a wide issue deep pipelined microarchitecture In this thesis a new dynamic branch predictor Two Level Adaptive Branch Prediction and a new instruction fetch mechanism suitable for superscalar processors are proposed to reduce the branch execution penalty in instruction fetch The branch predictor uses two levels of branch history information to make predictions the history of the last k branches encountered and the branch behavior for the last s occurrences of the specific pattern of these k branches Its nine variations are identified according to how finely the history information is gathered The cost effectiveness of the variations is compared Simulation results show that the average misprediction rate for the Two Level Adaptive branch predictor with a reasonable

implementation cost is 3% over nine programs in the SPEC89 benchmark suite while other known schemes achieve at least 5 6% average misprediction rate The branch predictor is integrated into an instruction fetch mechanism that is able to fetch multiple instructions each cycle and change instruction flow without incurring any pipeline bubbles Compared with designs which use other branch predictors the proposed design significantly reduces the branch execution penalty
