

Controlling Chemical Reactions

Understanding Main Issues

Reaction types (exothermic, endothermic, spontaneous, etc.) allow you to predict if a reaction will occur.

1. How does temperature affect reaction rates? Will a reaction occur? How does temperature affect the equilibrium of the reaction? (Le Chatelier's principle) (Exothermic reactions: lower temperature favors the forward reaction; Endothermic reactions: higher temperature favors the forward reaction)
2. Temp. is the activation energy (energy barrier) for a reaction to occur. (Exothermic reactions: lower temperature favors the forward reaction; Endothermic reactions: higher temperature favors the forward reaction)
3. Factors affecting reaction rate: concentration, temperature, surface area, catalyst. (Exothermic reactions: lower temperature favors the forward reaction; Endothermic reactions: higher temperature favors the forward reaction)

Equilibrium Chemistry

Reaction equilibrium is reached when the forward and reverse reaction rates are equal.

1. Exothermic reactions: lower temperature favors the forward reaction.
2. Endothermic reactions: higher temperature favors the forward reaction.

Controlled Interphases in Composite Materials Hatsuo Ishida, 2012-12-06 The third International Conference on Composite Interfaces ICCI III was held under the auspices of ASM International The Aluminum Company of America Alcoa The Edison Polymer Innovation Co EPIC Case Western Reserve University Nippon Glass Fiber Co Nitto Boseki Co Office of Naval Research ONR SAMPE Japan Teijin Co Mobay Co Union Carbide Co and Vetrotex Sain Gobain The underlying philosophy of the conference continues to be the promotion of fundamental understanding of the structure and role of composite interfaces With the growth of composite interface studies the research direction naturally changes from characterization and understanding of interfacial structure to controlling this structure For this reason the conference was subtitled Controlled Interphase Structure The rather unfamiliar phrase interphase is used to emphasize the interfacial region whose properties are different from the bulk The importance of the interphase to the mechanochemical properties has been rapidly recognized among composite researchers in recent years The conference incorporated nine sessions No concurrent sessions were planned because of the strong interest among participants and organizers to intermix researchers from different disciplines Papers

presented were redistributed in Parts I through V. Because of this both the conference and proceedings are not organized based on the traditional disciplines or materials but rather around concepts **Mechanics of Structures and Materials**
