Computer-Mediated Briefing for Architects
Koutamanis, Alexander, 2013-10-31 With the growing significance of the end user in architecture, the subject of briefing is a re-emerging one in architectural education. Various types of computer programs and database management systems have aided in the organization and utilization of brief information as a framework for designing and identifying potential improvements. Computer Mediated Briefing for Architects overviews the possibilities and limitations offered by various types of computer programs such as database management systems, diagramming software, CAD, and BIM. This book offers a practical approach in the accommodation of these programs and is an essential reference for architectural educators, students, and practitioners with hands-on experience in either compiling briefs or using the briefs for design. Structures and Architecture - Bridging the Gap and Crossing Borders Paulo J.S. Cruz, 2019-07-08 Structures and Architecture: Bridging the Gap and Crossing Borders contains the lectures and papers presented at the Fourth International Conference on Structures and Architecture (ICSA2019) that was held in Lisbon, Portugal, in July 2019. It also contains a multimedia device with the full texts of the lectures presented at the conference, including the 5 keynote lectures and almost 150 selected contributions. The contributions on creative and scientific aspects in the conception and construction of structures on advanced technologies and on complex architectural and structural applications represent a fine blend of scientific, technical, and practical novelties in both fields. ICSA2019 covered all major aspects of structures and architecture, including building envelopes, faades, comprehension of complex forms, computer and experimental methods, futuristic structures, concrete and masonry structures, educating architects and structural engineers, emerging technologies, glass structures, innovative architectural and structural design, lightweight and membrane structures, special structures, steel and composite structures, structural design challenges, tall buildings, the borderline between architecture and structural engineering, the history of the relationship between architects and structural engineers, the tectonic of architectural solutions, the use of new materials, timber structures, among others. structural and infrastructural projects *Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art* Daniele Peila, Giulia Viggiani, Tarcisio Celestino, 2019-04-17 *Tunnels and Underground Cities Engineering and Innovation meet Archaeology Architecture and Art* contains the contributions presented at the World Tunnel Congress 2019 Naples Italy 3-9 May 2019. The use of underground space is continuing to grow due to global urbanization, public demand for efficient transportation and energy saving production and distribution. The growing need for space at ground level along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International ITA and Italian SIG Tunnelling Association. By placing key infrastructures underground, the black circle in the logos it will be possible to preserve and enhance the quality of the space at ground level, the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life and adaptability to future and varied functions. The 700 contributions cover a wide range of topics from more traditional subjects connected to technical challenges of design and construction of underground works with emphasis on innovation in tunneling engineering to less conventional and archetypically Italian themes such as archaeology, architecture and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment; sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management; contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. *Tunnels and Underground Cities Engineering and Innovation meet Archaeology Architecture and Art* is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world and for academics who are interested in underground constructions and geotechnics.
