

# AUTOCAD: EXAMINATION OF FACTORS INFLUENCING USER ADOPTION

ANNA BAJ-ROGOWSKA 

## ABSTRACT

The primary purpose of the research is to examine and validate determinants of user intention to use AutoCAD software, utilising the constructs from prior studies in a more integrated model. The paper proposes a revised Technology Acceptance Model (TAM) for measuring the adoption of AutoCAD. In the study, a latent construct PRA (perceived physical accessibility) was added to the proposed research model as a new determinant of AutoCAD adoption. An online survey of AutoCAD users was conducted to collect data. This data was empirically used to test the proposed research model. The Structural Equation Modelling (SEM) technique was used to evaluate the causal model, and the confirmatory factor analysis was performed to examine the reliability and validity of the measurement model. The study results show that user behavioural intention to use AutoCAD is significantly affected by three determinants: perceived usefulness, perceived ease of use and perceived physical accessibility of the software. This finding contributes to an expanded understanding of the factors that promote acceptance of AutoCAD software. Moreover, the main contribution of this study is to verify the impact of the added PRA variable on the behavioural intention to use and the actual use of AutoCAD, and also to create measurement scales for this new latent variable in TAM.

## INTRODUCTION

Considering the rapid growth of the use of information technologies (IT) in business and in such areas as engineering, the subject of acceptance and evaluation of AutoCAD software used by engineers in the process of designing deserves special attention. An

understanding of what determines the adoption of software may provide information that will contribute to the promotion of its success.

The problems related to the promotion and analysis of IT applications are among the leading fields of business informatics studies. The theories proposed in

**Engineering Drawing (With Auto Cad)** B. V. R. Gupta,M. Raja Roy,2009-01-01

Engineering Drawing is a common subject offered to all branches of engineering in all the universities in India and abroad because it is the language of engineers. It helps one to convert his ideas into reality through drawing. This subject also helps one to develop imagination. This book helps both faculty and students to understand the concepts on their own. The book presents a step-by-step approach with important notes to remember. Worked examples and different problems in the exercise are presented under various categories. The present edition includes Scales also and some typical worked examples have been added in all the chapters. The chapter on Computer aided drawing is new in this edition. In the exercises also questions from different university examination papers are included under various categories which give an idea of different topics important for examinations. From the point of view also, there are nearly 150 worked examples, 250 problems in the exercises and 200 problems of the university examinations. There are 350 figures altogether. The first highlight of this book is that one can understand the projections of straight lines and the second one is to choose the right method for the given problem wherever there are more than one method. Especially in the Intersections of surfaces of solids and Perspective projections are given. Just knowing the methods is not enough but one should know which method has to be applied is all the more important.
