Before Assembly and Installation of the Sliding Door

- * Check the product for defects. Installation queries on damaged parts can not be resolved once the installation has been completed.
- * The Tray must be completely sealed along steel walls, steel level surface, with a Scott-Lambs and should have no leaks.

Notes: It is recommended that the Wall Profiles are fitted directly onto tiles or a similar sealed surface. If walls or trays or a combination of both are out of level you will not achieve full adjustment of maximum width.

IMPORTANT

- This is an importer's document as it holds the Consumer Guarantee which needs to be returned. Please ensure it is retained by the end user.
- Please read these instructions carefully prior to assembly/installation.
- Unpack and handle the product with care to avoid damage to the product finish.
- Check for major structural defects and water pipes prior to commencing any drilling work.
- Do not plasterboard over the air of the Tray.
- Ensure the walls where the Enclosures are to be fixed are vertical. If the walls are not completely vertical there is a risk of adjustment in each slot (Patent) Patent. It is recommended that the walls are fixed after the Tray is fitted and sealed before fitting the Enclosures. This will provide maximum adjustment and seal and sealing.
- No average should be made to work throughout safety glass.
- Pictures used are for illustration purposes only, product designs may differ slightly as a result of continuing product development.
- Roamer's toughened glass is completely safe for use in our shower enclosures and bath enclosures, providing our products are installed according to our guidelines.
- It is important to note, that the glass must not be mounted or 'pinned' in such a way that would cause a stress point to develop in the glass. In addition, it must not be subjected to any sharp impact or severe temperature fluctuation which may also cause a stress point to develop in the glass.
- Roamer's toughened glass is physically and thermally significantly stronger than standard glass. During our toughening process the stresses contained within any glass are balanced so, if in the unlikely situation any of the above occurs and the glass breaks, the glass will shatter safely into small blunt-edged sized glass fragments.

If you have any problems with your Shower Enclosure once installed, please refer back to this Instruction Manual to ensure you have completed every stage correctly. If you still experience any difficulties or have any queries, please contact us on **+44 (0) 845 370 1130** for Technical Assistance or **+44 (0) 845 370 1120** for Sales.

Cerebellar Cortex S.L. Palay, V. Chan-Palay, 2012-12-06 The origins of this book go back to the first electron microscopic studies of the central nervous system The cerebellar cortex was from the first an object of close study in the electron microscope repeating in modern cytology and neuroanatomy the role it had in the hands of RAMON y CAJAL at the end of the nineteenth century The senior author vividly remembers a day early in 1953 when GEORGE PALADE with whom he was then working showed him an electron micrograph of a cerebellar glomerulus saying That is what the synapse should look like It is true that the tissue was swollen and the mitochondria were exploded but all of the essentials of synaptic structure were visible At that time small fragments of tissue fixed by immersion in osmium tetroxide and embedded in methacrylate were laboriously sectioned with glass knives without any predetermined orientation and then examined in the electron microscope After much searching favorably preserved areas were studied at the cytological level in order to recognize the parts of neurons and characterize them Such procedures dependent upon random sections and uncontrollable selection by a highly erratic technique of preservation precluded any systematic investigation of the organization of a particular nucleus or region of the central nervous system It was difficult enough to distinguish neurons from the neuroglia
