

## A1 States of matter

1. a) i) Ammonium chloride (1)  
 ii) Diffusion (1)  
 Diffusion is the movement of particles from an area of higher concentration to an area of lower concentration until the particles are evenly distributed. (2)  
 iii) The ammonia solution gave off ammonia gas and the hydrochloric acid gave off hydrogen chloride gas. The particles of the two gases diffused along the tube, collided and reacted to form ammonium chloride. (2)
- b) i)  (1)  
 ii) The distilled water had a higher water content than the cytoplasm inside the paw-paw cells and the cell membranes were differentially permeable. The water molecules were able to move through the membranes into the cells causing the cells to swell and the strips to increase in volume. (3)  
 iii) Osmosis (1)
- c) Sodium chloride draws water out of the cells of the fish and any micro-organisms by osmosis. Water is, therefore, not available for chemical reactions in the cells, some of which cause decay and micro-organisms can't grow. (2)

2. a)

Property	Solid	Liquid	Gas
Volume		definite	variable; the volume is the same as the entire container
Arrangement of particles	packed closely together, usually in a regular way		randomly arranged with large spaces between
Energy of particles	have very small amounts of kinetic energy	have medium amounts of kinetic energy	

(6)

- b) i) The particles have large spaces between them, so they can be easily pushed closer together. (1)  
 ii) The particles are packed tightly together with very little empty space between. (1)  
 iii) The particles move around rapidly and have weak forces of attraction between them, so they spread out to fill any available space in the container. (2)

- c) i) A: Melting B: Boiling or evaporation (4)  
 C: Freezing D: Condensation (4)  
 ii) Iodine or carbon dioxide or ammonium chloride or naphthalene (1)  
 iii) Liquid (1)  
 iv) 54 °C (1)  
 v)  (1)

## A2 Mixtures and separations

1. a) i) 

	Pure substance	Mixture
Composition		variable
Properties	fixed and constant	variable; the components retain their individual properties

 (3)
- ii) An element is a pure substance that cannot be broken down into any simpler substances by any ordinary chemical or physical means. A compound is a pure substance that contains two or more different types of element that are bonded together chemically in fixed proportions and in such a way that their properties have changed. (2)
- b) i) The particles in a suspension are larger than those in a colloid. (1)  
 ii) The particles in a suspension settle if left undisturbed, whereas the particles in a colloid never settle. (1)  
 iii) Light does not pass through a suspension, whereas most colloids scatter light. (1)
- c) i) A solution is a homogeneous mixture consisting of two or more components, one of which is usually a liquid. (1)  
 ii) Solubility is the mass of solute that will saturate 100 g of solvent at a given temperature. (1)
- d) i) 17 g per 100 g water (1)  
 ii) 45 °C (1)  
 iii) At 76 °C, 54 g of Z saturate 100 g water  
 At 36 °C, 12.5 g of Z saturate 100 g water  
 $\therefore$  mass of Z crystallising out of a saturated solution containing 100 g water =  $54 - 12.5$  g = 41.5 g (3)
- iv) At 62 °C, 39 g of Z saturate 100 g water  
 $\therefore$  at 62 °C, 45 g of Z saturate  $\frac{100}{39} \times 45$  g water = 115.4 g of water (2)
- v) At 55 °C, 33 g of Z saturate 100 g water  
 $\therefore$  at 55 °C,  $\frac{33}{100} \times 350$  g of Z saturate 350 g water = 115.5 g of Z (2)

timing belt snaped on fiat palio 16v how do i find the cam marks fixya - Jan 09 2023

web apr 9 2014 7 answers there are special tools you need to lock the cams in the correct position without these it is near  
impossible to get the valve timing 100 right these locking plates fit on the opposite ends of the cam boxes from the cam gears  
and belt by removing the blanks on that end i managed to borrow a set and set it up correctly
