

Fact or Cap: Double Stuffed Oreo Cookie Lab

Big Idea:

NEBSCO, the company that makes Oreos, claims that their double stuffed Oreos have twice as much cream as their original Oreos. Today, your job is to see if their statement is correct by using what you know about the scientific method and how to create and test an experiment.

Creating your Hypothesis:

Any good scientific experiment has a hypothesis. Your hypothesis should be written as an if/then statement where the if portion explains what you will be testing and the then statement explains what outcome you expect to get.

In the space below write a testable hypothesis for your experiment.

Variables:

Every experiment has variables. Some variables change while others stay the same during an experiment. The independent variable is the variable in an experiment that is changed by the scientist and is what is being tested. The dependent variable is the variable that changes based on the independent variable and is the data that the scientist collects. Constants are variables that will stay the same throughout the entire experiment.
