

## A Periodic Table Logic Problem

**Purpose:** In this activity you will use a set of clues to identify a set of unknown elements in a periodic table. The elements are the elements with atomic numbers 1-20 and 31-36. A letter of the alphabet is used to represent each unknown element. The letter designation is not related to an element's chemical symbol. Each clue refers to a property of an element or a relationship an element has to other elements in the periodic table. Along with logic and knowledge of properties, you will use the periodic trends to solve the puzzle.

**Grade:** Neatness and completeness count.

**Procedure:** Use the following trend clues to place the elements in their proper places on the provided periodic table. Try to identify the elements with direct clues first. For example, B is a direct clue because it identifies only one element.  
Group 1 Group 2 Group 13 Group 14 Group 15 Group 16 Group 17 Group 18

Work copy

Group 1	Group 2		Group 13	Group 14	Group 15	Group 16	Group 17	Group 18

A - Has one of the highest electronegativities on the table.

B - Has one electron in a 3p orbital.

C - Has five electrons in the 4th energy level.

D - Forms the smallest 2+ ion.

E - Tends to gain one electron.

F - Electron configuration is  $1s^2 2s^2 2p^6 3s^2 3p^3$

G - The most electronegative element.

H - An ion of this element with a 2+ charge has 18 electrons.

I - Its second ionization energy is large compared to its first ionization energy.

The Periodic Table Eric R. Scerri, 2020 The Periodic Table Its Story and Its Significance traces the evolution and development of the periodic table from Mendeleev's 1869 first published table and onto the modern understanding provided by modern physics

*Sheets, Diagrams, and Realism in Peirce* Frederik Stjernfelt, 2022-09-06 This book investigates a number of central problems in the philosophy of Charles Peirce grouped around the realism of his semiotics the issue of how sign systems are developed and used in the investigation of reality Thus it deals with the precise character of Peirce's realism with Peirce's special notion of propositions as signs which at the same time denote and describe the same object It deals with diagrams as signs which depict more or less abstract states of affairs facilitating reasoning about them with assertions as public claims about the truth of propositions It deals with iconicity in logic the issue of self control in reasoning dependences between phenomena in their realist descriptions A number of chapters deal with applied semiotics with biosemiotic sign use among pre human organisms the multimedia combination of pictorial and linguistic information in human semiotic genres like cartoons posters poetry monuments All in all the book makes a strong case for the actual relevance of Peirce's realist semiotics

**Climate in Motion** Deborah R. Coen, 2024-05-31 Today predicting the impact of human activities on the earth's climate hinges on tracking interactions among phenomena of radically different dimensions from the molecular to the planetary Climate in Motion shows that this multiscalar multicausal framework emerged well before computers and satellites Extending the history of modern climate science back into the nineteenth century Deborah R. Coen uncovers its roots in the politics of empire building in central and eastern Europe She argues that essential elements of the modern understanding of climate arose as a means of thinking across scales in a state the multinational Habsburg Monarchy a patchwork of medieval kingdoms and modern laws where such thinking was a political imperative Led by Julius Hann in Vienna Habsburg scientists were the first to investigate precisely how local winds and storms might be related to the general circulation of the earth's atmosphere as a whole Linking Habsburg climatology to the political and artistic experiments of late imperial Austria Coen grounds the seemingly esoteric science of the atmosphere in the everyday experiences of an earlier era of globalization Climate in Motion presents the history of modern climate science as a history of scaling that is the embodied work of moving between different frameworks for measuring the world In this way it offers a critical historical perspective on the concepts of scale that structure thinking about the climate crisis today and the range of possibilities for responding to it
