Abstract: This paper examines the impact of the 1997-1998 Asian financial crisis on the performance of the Japanese stock market. The results show that the Japanese stock market experienced a significant decline in performance during the crisis period, which was attributed to a combination of factors, including a sharp increase in the risk premium and a decrease in the market's liquidity. The paper also discusses the implications of these findings for the Japanese economy and the role of the government in stabilizing the market.
