

## Step 18: Setting Trolley Close Position

Activate opener to confirm trolley close position is 9" to 10" between the inside face of the door and the solid cushion arm rod. If adjustment of the close trolley position is necessary, use the CLOSE TRAVEL ADJUSTMENT knob located on the bottom of the Motor Head Unit. A 1/4 turn equals approximately 1" of trolley movement, turn clockwise to move forward; counter-clockwise to move back.

## Step 19: Connecting Door Arm to Door

### Door Mounted Bracket

Visually align cushion arm connecting hole with middle hole of door bracket by rotating tube section in appropriate direction.

Release trolley (cushion arm attached) with manual release cord and pull trolley a few inches toward motor. Now rotate cushion arm tube section 2 turns counter-clockwise to provide a cushion when door is closed or encounters an obstruction. Align connecting hole in cushion arm to middle hole in door bracket; insert 3/8" dia. bolt and tighten locking nut, allowing for free pivoting of arm.

**Note:** Do not over tighten locking nut, as this will cause binding between cushion arm and door bracket.

## Step 20: Setting Door Close Travel Plus "Contact Obstruction Sensing" Test

With push button, activate door to full open position; reactivate to close position. The door should stop on the floor with the cushion arm and the bottom door seal slightly compressed. If the door reverses off the floor, turn close travel knob 1/4 turn "less". If door is not completely closed, turn travel knob 1/4 turn "more". Repeat if necessary.
