Books In Print 2004-2005 Ed Bowker Staff,Staff Bowker, Ed,2004 *Investigating Psychology* John Hyman,2016-08-05
Originally published in 1991 the essays in this volume are written by philosophers who were convinced that Wittgenstein s investigations in philosophical psychology were of direct relevance to current experimental psychology at the time Rather than reflecting on the nature of psychological theory at a high level of abstraction they examined leading theories and controversies in the experimental study of vision and of language in order to reveal the conceptual problems that they raise and the philosophical theories that have exerted an influence upon them Under the section headings Language and Behaviour and Perception and Representation the essays examine the work of Chomsky Gregory Marr Weiskrantz and others and discuss problems ranging from artificial intelligence to animal communications from blindsight to machine vision The collection aims to demonstrate that philosophical investigations can contribute to psychological science by extirpating conceptual confusions which have been woven into the fabric of empirical research The majority of the essays had been specially commissioned and the contributors include several of the most distinguished exponents of Wittgenstein s philosophical legacy at the time *Science and Inequality* Scott Frickel,Kelly Moore,2025-08-15 Science and technology produce a wide range of benefits in society but they also create harm both of which are unequally distributed across social groups and geographic regions This incisive book provides a set of analytical tools to understand how inequality relating to science and technology is produced and how the field can be reorganized to make good on its promise to improve life for all Using a range of evidence and examples Frickel and Moore show that science and technology are closely bound up with social inequalities including linked problems of poor health environmental degradation racism and sexism They use the frame of scientific inequality formations to investigate the technoscientific sources of unequal power relations in society examining issues such as the underdevelopment of non profitable technologies how laws and markets direct scientific advances and the exclusion of certain social groups from the creation of knowledge and solutions relevant to their lives This timely book illuminates interventions that redirect science and technology toward more equitable ends with the potential to be more widely distributed charting a path to a more just future **Making Sense of Health, Disease, and the Environment in Cross-Cultural History: The Arabic-Islamic World, China, Europe, and North America** Florence Bretelle-Establet,Marie Gaille,Mehrnaz Katouzian-Safadi,2020-01-01 This book has been defined around three important issues the first sheds light on how people in various philosophical religious and political contexts understand the natural environment and how the relationship between the environment and the body is perceived the second focuses on the perceptions that a particular natural environment is good or bad for human health and examines the reasons behind such characterizations the third examines the promotion in history of specific practices to take advantage of the health benefits or avoid the harm caused by certain environments and also efforts made to change environments supposed to be harmful to

human health The feeling and or the observation that the natural environment can have effects on human health have been and are still commonly shared throughout the world This led us to raise the issue of the links observed and believed to exist between human beings and the natural environment in a broad chronological and geographical framework In this investigation we bring the reader from ancient and late imperial China to the medieval Arab world up to medieval modern and contemporary Europe This book does not examine these relationships through the prism of the knowledge of our modern contemporary European experience which still too often leads to the feeling of totally different worlds Rather it questions protagonists who in different times and in different places have reflected on their own terms on the links between environment and health and tries to obtain a better understanding of why these links took the form they did in these precise contexts This book targets an academic readership as well as an informed audience for whom present issues of environment and health can be nourished by the reflections of the past The Bookman ,1898 Origins, Time and Complexity George V.
