Characterizing Entanglement and Quantum Correlations Constrained by Symmetry Jordi Tura i Brugués, 2016-12-01 This thesis focuses on the study and characterization of entanglement and nonlocal correlations constrained under symmetries It includes original results as well as detailed methods and explanations for a number of different threads of research positive partial transpose PPT entanglement in the symmetric states a novel experimentally friendly method to detect nonlocal correlations in many body systems the non equivalence between entanglement and nonlocality and elemental monogamies of correlations Entanglement and nonlocal correlations constitute two fundamental resources for quantum information processing as they allow novel tasks that are otherwise impossible in a classical scenario However their elusive characterization is still a central problem in quantum information theory The main reason why such a fundamental issue remains a formidable challenge lies in the exponential growth in complexity of the Hilbert space as well as the space of

multipartite correlations Physical systems of interest on the other hand display symmetries that can be exploited to reduce this complexity opening the possibility that some of these questions become tractable for such systems **Quantum**

Systems under Gravitational Time Dilation Magdalena Zych,2017-02-06 This thesis introduces a new theoretical tool to explore the notion of time and temporal order in quantum mechanics the relativistic quantum clock framework It proposes novel thought experiments showing that proper time can display quantum features e g when a clock runs different proper times in superposition The resulting new physical effects can be tested in near future laboratory experiments with atoms molecules and photons as clocks The notion of time holds the key to the regime where quantum theory and general relativity overlap which has not been directly tested yet and remains largely unexplored by the theory The framework also applies to scenarios in which causal relations between events become non classical and which were previously considered impossible to address without refuting quantum theory The relativistic quantum clock framework offers new insights into the foundations of quantum theory and general relativity *Introductory Calculus, with Analytic Geometry* Edward Griffith Begle,1960
