The Nature of Scientific Evidence Mark L. Taper, Subhash R. Lele, 2010-12-15 An exploration of the statistical foundations of scientific inference *The Nature of Scientific Evidence* asks what constitutes scientific evidence and whether scientific evidence can be quantified statistically Mark Taper Subhash Lele and an esteemed group of contributors explore the relationships among hypotheses models data and inference on which scientific progress rests in an attempt to develop a new quantitative framework for evidence Informed by interdisciplinary discussions among scientists philosophers and statisticians they propose a new evidential approach which may be more in keeping with the scientific method *The Nature of Scientific Evidence* persuasively argues that all scientists should care more about the fine points of statistical philosophy because therein lies the connection between theory and data Though the book uses ecology as an exemplary science the interdisciplinary evaluation of the use of statistics in empirical research will be of interest to any reader engaged in the quantification and evaluation of data

Elicitation of Expert Opinions for Uncertainty and Risks Bilal M. Ayyub, 2001-06-27 Experts despite their importance and value can be double edged swords They can make valuable contributions from their deep base of knowledge but those contributions may also contain their own biases and pet theories Therefore selecting experts eliciting their opinions and aggregating their opinions must be performed and handled carefully w

Mathematical Methods of Statistics , 1999 *Epistemic Justification* Richard Swinburne, 2001-06-21 Richard Swinburne offers an original treatment of a question at the heart of epistemology what makes a belief a rational one or one which the believer is justified in holding He maps the various totally different and purportedly rival accounts that

philosophers give of epistemic justification internalist and externalist and argues that they are really accounts of different concepts He distinguishes as most epistemologists do not between synchronic justification justification at a time and diachronic justification synchronic justification resulting from adequate investigation both internalist and externalist He argues that most kinds of justification are worth having because for different reasons indicative of truth However it is only justification of internalist kinds that can guide a believer's actions Swinburne goes on to show the usefulness of the probability calculus in elucidating how empirical evidence makes beliefs probably true every proposition has an intrinsic probability an a priori probability independent of empirical evidence which may be increased or decreased by empirical evidence This innovative and challenging book will refresh epistemology and rewrite its agenda

Playing against Nature Seth Stein, Jerome Stein, 2014-04-09 Defending society against natural hazards is a high stakes game of chance against nature involving tough decisions How should a developing nation allocate its budget between building schools for towns without ones or making existing schools earthquake resistant Does it make more sense to build levees to protect against floods or to prevent development in the areas at risk Would more lives be saved by making hospitals earthquake resistant or using the funds for patient care What should scientists tell the public when as occurred in L'Aquila Italy and Mammoth Lakes California there is a real but small risk of an upcoming earthquake or volcanic eruption Recent hurricanes earthquakes and tsunamis show that society often handles such choices poorly Sometimes nature surprises us when an earthquake hurricane or flood is bigger or has greater effects than expected from detailed hazard assessments In other cases nature outsmarts us doing great damage despite expensive mitigation measures or causing us to divert limited resources to mitigate hazards that are overestimated Much of the problem comes from the fact that formulating effective natural hazard policy involves combining science economics and risk analysis to analyze a problem and explore the costs and benefits of different options in situations where the future is very uncertain Because mitigation policies are typically chosen without such analysis the results are often disappointing This book uses general principles and case studies to explore how we can do better by taking an integrated view of natural hazards issues rather than treating the relevant geoscience engineering economics and policy formulation separately Thought provoking questions at the end of each chapter invite readers to confront the complex issues involved Readership Instructors researchers practitioners and students interested in geoscience engineering economics or policy issues relevant to natural hazards Suitable for upper level undergraduate or graduate courses Additional resources can be found at <http://www.wiley.com/go/Stein/Playingagainstnature>
