

# Chapter 11 Section Review Answer Key

## Section Review 11-1

1. Mendel's principle of dominance states that some alleles are dominant and others are recessive.  
 2. A trait controlled by a dominant allele will be produced if there are two dominant alleles present or one dominant allele and one recessive allele.  
 3. A trait controlled by a recessive allele will be produced only when two recessive alleles are present.  
 4. Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene. With the pea plants, each F<sub>1</sub> generation plant produces two types of gametes—for example, those with the allele for tallness and those with the allele for shortness.  
 5. True-breeding plants allowed Mendel to pinpoint the cause of variation in traits because he could control which plants bred. Without true-breeding plants, Mendel would not have been able to draw his conclusions because there would have been too many variables.  
 6. Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself.  
 7. 225 plants will show the trait controlled by the recessive allele.  
 8. The trait controlled by the recessive allele would not have been produced in the resulting F<sub>2</sub> generation. Both F<sub>1</sub> generation plants need to have *rr* allele combination for the trait controlled by the recessive allele to be produced in one of the F<sub>2</sub> generation plants.

## Section Review 11-2

1. Probability is the likelihood that a particular event will occur. The principles of probability can be used to predict the outcomes of genetic crosses.  
 2. Punnett squares are used to predict and compare the genetic variations that will result from a cross.  
 3. The seed color controlled by the dominant allele has a 50% probability of being produced and the seed color controlled by the recessive allele has a 50% probability of being produced. Students should have 25% and *Rr* in the upper and lower left boxes and 25% and *rr* in the upper and lower right boxes of their Punnett square.  
 4. Homozygous plants have two identical alleles for a particular trait, *TT* or *rr*. In contrast, heterozygous plants have two different alleles for a particular trait, *Tt*.  
 5. *Ff* and *FF* are different genotypes, but both combinations will produce the same phenotype, the trait controlled by the dominant *F* allele.  
 6. *TT* 25%  
 7. *Tt* 25%  
 8. *Tt* 25%  
 9. *rr* 25%

## Section Review 11-3

1. segregate  
 2. multiple alleles, multiple genes  
 3. b  
 4. c  
 5. d  
 6. a  
 7. See punnett square  
 8. In incomplete dominance, the heterozygous phenotype is somewhere in between the two homozygous phenotypes. In codominance, the heterozygous phenotype shows both traits.

9. Polygenic traits have more variation in phenotypes because different combinations of alleles for these genes produce many different phenotypes.  
 10. Morgan chose fruit flies because fruit flies are easy to keep in the lab and they reproduce quickly, producing a great number of offspring.

 11. Mitosis produces two cells. Meiosis produces four cells.  
 12. Cells resulting from mitosis have a diploid number of chromosomes and are genetically identical to each other and to the original parent cell. Cells resulting from meiosis have a haploid number of chromosomes and are genetically different from each other and the original parent cell.  
 13. Both products of meiosis I and II are haploid cells. Two cells result from meiosis I, and four cells result from meiosis II.  
 14. Gamete formation in either sex is a result of meiosis. In males, the four cells resulting from meiosis usually all become gametes. In females, however, the cytoplasm is not divided evenly, so that only one of the four cells becomes a gamete. The other cells become polar bodies, which are not used in reproduction.  
 15. Each daughter cell would contain 14 chromosomes.

Werner, Elysia Moschos, William F. Griffith, Victor E. Beshay, David D. Rahn, Debra L. Richardson, Barbara L. Hoffman, 2016-11-05 Gain a better understanding of the basic principles of gynecology presented in Williams Gynecology Third Edition with this full color study guide Directly derived from the content of Williams Gynecology Third Edition this authoritative study guide is designed to assess your understanding and retention of the acclaimed evidence based coverage of the parent text Here you will find everything you need for an efficient chapter by chapter review of the text material Featuring a full color open design the study guide contains more than 2 000 review questions with clinical vignettes an answer key that includes corresponding textbook page numbers to aid further study and hundreds of precise images to sharpen your visual diagnosis skills The most rigorous gynecology summary available NEW Color images included as question material NEW Clinical case questions assess your ability to apply the content to real world patient encounters More than 2 000 evidence based multiple choice questions

cover every major topic in clinical gynecology includes a mix of straight Q A and clinical vignettes Answer key provides the correct answer and cites page numbers in Williams Gynecology Third Edition to prompt in depth discussion and continued study Coverage spans reproductive endocrinology and infertility female pelvic medicine reconstructive surgery and gynecologic oncology

**Biology** Burton S. Guttman, Johns W. Hopkins, 1999 This fresh new approach to general biology integrates new research in genetics ecology evolution and molecular biology through four unifying conceptual themes Concepts are covered when appropriate in sufficient but not overwhelming detail The process of scientific discovery is emphasized and active learning is promoted through problem solving exercises in every chapter

**Cell Biology and Genetics** Cecie Starr, Ralph Taggart, 1998 Cell Biology and Genetics covers Chapter 1 Unit I The Cellular Basis of Life and Unit II Principles of Inheritance and contains a customized table of contents and the back matter from Biology The Unity and Diversity of Life The Cell Biology Genetics volume includes characteristics of life scientific methods basic chemistry cell biology metabolism mitosis and meiosis classical genetics human genetics molecular genetics recombinant DNA and genetic engineering

**Genetics** Robert J. Brooker, Brooker Robert, 2004-06 Contains solutions to the end of chapter problems and questions to aid the students in developing their problem solving skills with the steps for each solution This guide follows the order of sections and subsections in the textbook and summarizes the main points in the text figures and tables It also contains concept building exercises

**Principles of Genetics** D. Peter Snustad, Michael J. Simmons, 2000 The cover shows many facets of genetics Top row Left The DNA double helix here imaged in a scanning tunneling micrograph is central to all genetics research Right Experimentation has shown that some social behaviors such as nest cleaning by honeybees is under genetic control Second row Left Inherited disorders such as albinism manifested here in a bullfrog have provided many insights about the genetic control of metabolism Right Gregor Mendel s 19th century work with pea plants elucidated the basic principles of inheritance Third row Left Efforts to combat HIV the virus that causes AIDS depend on knowing how the virus expresses its genes inside the cells of the immune system Right The fruit fly is ideally suited for studies on the genetic control of embryonic development and organ formation Fourth row Left The identification of mutations that cause unregulated cell division facilitates the diagnosis treatment and prevention of breast cancer Right HeLa cells derived in 1951 from Henrietta Lacks a woman who died of cervical cancer thrive in the laboratory and are used in research worldwide Bottom row The replication of chromosomes left is a prerequisite for cell division right
