**Concept of an internet-based operating system** John-Robert Funck, 2008-05-06 Seminar paper from the year 2006 in the subject Computer Science Internet New Technologies grade 1.0 University of Applied Sciences S. Westfalen in Iserlohn course English Publications and Presentations language English abstract Nowadays data processing is usually done on computers. On these computers it is necessary to have an operating system (OS) installed which manages the relationship between application software and hardware managing tasks. This kind of system has worked well so far. However, there are various problems with a built-in operating system. It requires powerful and expensive hardware to operate smoothly. Additionally, complex operation knowledge is necessary, and often there are compatibility issues among programs. Moreover, there is a waste of time due to maintenance and so forth. My solution to the problems mentioned above is an internet-based operating system. In this paper, I will describe a way to improve data processing while getting rid of the built-in operating system and its shortcomings. At first, I will explain the underlying structure of my solution, and in the next part, I will suggest how this structure can be realized. Afterwards, I will discuss the advantages and disadvantages of my solution, and finally, I will give a brief overview of current developments of internet-based operating systems.

**Advances in Web-Based Learning -- ICWL 2003** Wanlei Zhou, Paul Nicholson, Brian Corbitt, Joseph Fong, 2003-09-09 1st The 2nd International Conference on Web-Based Learning ICWL 2003 took place in Melbourne, Australia. ICWL 2003 followed the tradition of the successful ICWL 2002 held in Hong Kong and aimed at providing an in-depth study of the technical and pedagogical issues as well as incorporating management issues of Web-based learning. Additionally, there was a focus on issues of interest to the learner, offering the optimal Web-based learning environment to achieve high academic results. Akin University organized this conference in conjunction with the Hong Kong Web Society to provide a forum which gathered educators, researchers, technologists, and implementers of Web-based learning from around the world to discuss, collaborate, and advance all relevant issues pertaining to this area of research. The main focus of ICWL 2003 was on the most critical areas of Web-based learning, in particular Web-based learning environments, virtual universities, pedagogical issues related to Web-based learning, multimedia-based e-learning, interactive e-learning systems, intelligence in on-line education, e-learning solutions, CSCL, and authoring tools for e-learning. In total, the conference received 118 papers from researchers and practitioners from 13 countries. Each paper was reviewed by at least three internationally renowned referees. Papers were rigorously examined and selected based on their originality, significance, correctness, relevance, and clarity of presentation. Among the high-quality submissions, 50 papers were accepted and included in the proceedings. Later, the proceedings editors will recommend that some high-quality papers from the conference be published in a special issue of an international journal.
