Successes in African Agriculture Haggblade, Steven, Hazell, Peter B. R., 2010-01-01 Sub Saharan Africa is one of the poorest regions of the world. Because most Africans work in agriculture, escaping such dire poverty depends on increased agricultural productivity to raise rural incomes, lower food prices, and stimulate growth in other economic sectors. Per capita agricultural production in sub Saharan Africa has fallen, however, for much of the past half century. *Successes in African Agriculture* investigates how to reverse this decline. Instead of cataloging failures, as many past studies have done, this book identifies episodes of successful agricultural growth in Africa and identifies processes, practices, and policies for accelerated growth in the future. The individual studies follow developments in, among other areas, the farming of maize in East and Southern Africa, cassava across the middle belt of Africa, cotton in West Africa, horticulture in Kenya, and dairying in East Africa. Drawing on these case studies and on consultations with agricultural specialists and politicians from across sub Saharan Africa, undertaken in collaboration with the African Union's New Partnership for Africa's Development, the contributors identify two key determinants of positive agricultural performance: agricultural research to provide more productive and sustainable technologies to farmers, and a policy framework that fosters market incentives for increasing production. The contributors discuss how the public and private sectors can best coordinate the convergence of both factors. Given current concerns about global food security, this book provides timely and important resources to policymakers and development specialists concerned with reversing the negative trends in food insecurity and poverty in Africa.

Teaching Constructivist Science, K-8 Michael L. Bentley, Edward S. Ebert, Christine Ebert, 2007 Invite young minds to engage in meaningful, standards-based science. Good teachers know that science is more than just a collection of facts in a textbook, and that teaching science goes beyond the mere transmission of information. Actively engaging students in the learning process is critical to building their knowledge base, assessing progress, and meeting science standards. *Teaching Constructivist Science K-8* shows teachers how to transform students' natural curiosity into dynamic learning opportunities. By helping students construct new knowledge using the understandings they bring to the classroom, teachers can make the most of instruction and new learning experiences. With practical applications, teaching strategies, activities, and assessment tools, this reader-friendly book demonstrates how to teach student-ready, standards-based science. Teachers will be able to use classic and new activities to teach big ideas with basic materials. An interview approach for uncovering student misunderstandings that block new learning. A rich resource list for finding materials and organizations. Guidelines for building a science-friendly environment. Sample lessons and learning experiences aligned to national science standards. Discussion questions for teacher study groups in each chapter. For both experienced and novice teachers, this accessible resource provides the perfect method to teach science in sound ways that make sense to students.

Postcolonialism Tariq Jazeel, 2019-02-22 Postcolonialism is a book that examines the influence of postcolonial theory in critical geographical thought and scholarship. Aimed at advanced

level students and researchers the book is a lively stimulating and relevant introduction to postcolonial geography that elaborates on the critical interventions in social cultural and political life this important subfield is poised to make The book is structured around three intersecting parts Spaces Identity hybridity Knowledge that broadly follow the trajectory of postcolonial studies since the late 1970s It comprises ten main chapters each of which is situated at the intersections of postcolonialism and critical human geography In doing so Postcolonialism develops three key arguments First that postcolonialism is best conceived as an intellectually creative and practical set of methodologies or approaches for critically engaging existing manifestations of power and exclusion in everyday life and in taken as given spaces Second that postcolonialism is at its core concerned with the politics of representation both in terms of how people and space are represented but also the politics surrounding who is able to represent themselves and on what whose terms Third the book argues that postcolonialism itself is an inherently geographical intellectual enterprise despite its origins in literary theory In developing these arguments and addressing a series of relevant and international case studies and examples throughout Postcolonialism not only demonstrates the importance of postcolonial theory to the contemporary critical geographical imagination It also argues that geographers have much to offer to continued theorizations and workings of postcolonial theory politics and intellectual debates going forward This is a book that brings critical analyses of the continued and omnipresent legacies of colonialism and imperialism to the heart of human geography but also one that returns an avowedly critical geographical disposition to the core of interdisciplinary postcolonial studies

Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
