## Chapter 7 Energy Momentum and Energy

Show your work and include units!

$t = 0 \text{ s}$   
momentum =  $0 \text{ kg}(\text{m/s})$

$t = 1 \text{ s}$   
momentum =  $100 \text{ kg}(\text{m/s})$

$t = 2 \text{ s}$   
momentum =  $200 \text{ kg}(\text{m/s})$

$t = 3 \text{ s}$   
momentum =  $200 \text{ kg}(\text{m/s})$

$t = 5 \text{ s}$   
momentum =  $0 \text{ kg}(\text{m/s})$

Bronco Brown wants to put  $Ft = \Delta mv$  to the test and try bungee jumping. Bronco leaps from a high cliff and experiences 3 s of free fall. Then the bungee cord begins to stretch, reducing his speed to zero in 2 s. Fortunately, the cord stretches to its maximum length just short of the ground below.

Fill in the blanks:

Bronco's mass is 100 kg.

Acceleration of free fall is  $10 \text{ m/s}^2$ .

Express values in SI units (distance in m, velocity in  $\text{m/s}$ , momentum in  $\text{kg} \cdot \text{m/s}$ , impulse in  $\text{N} \cdot \text{s}$ , and deceleration in  $\text{m/s}^2$ ).

$d = 1/2 at^2$

The 3-s free-fall distance of Bronco just before the bungee cord begins to stretch = 15 m

$\Delta mv$  during the 0 to 3-s interval of free fall =                     

$\Delta mv$  during the 3 to 5-s of slowing down =                     

Impulse during the 3 to 5-s of slowing down =                     

Average force exerted by the cord during the 3 to 5-s interval of slowing down =                     

How about work and energy? How much KE does Bronco have 3 s after he first jumps?

11,250 J

How much does gravitational PE decrease during this 3 s?

-15,000 J

$1/2(100 \text{ kg})(15 \text{ m/s}^2)$   
 $50 \text{ kg}(250 \text{ m/s}^2)$

What two kinds of PE are changing during the 3 to 5-s slowing-down interval?

Gravitational Potential Energy

Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation      **El-Hi Textbooks and Serials in Print** ,2003      *Introduction to Quantum Information Science* Masahito Hayashi,Satoshi Ishizaka,Akinori Kawachi,Gen Kimura,Tomohiro Ogawa,2014-08-22 This book presents the basics of quantum information e g foundation of quantum theory quantum algorithms quantum entanglement quantum entropies quantum coding quantum error correction and quantum cryptography The required knowledge is only elementary calculus and linear algebra This way the book can be understood by undergraduate students In order to study quantum information one usually has to study the foundation of quantum theory This book describes it from more an operational viewpoint which is suitable for quantum information while traditional textbooks of quantum theory lack this viewpoint The current book bases on Shor s algorithm Grover s algorithm Deutsch Jozsa s algorithm as basic algorithms To treat several topics in quantum information this book covers several kinds of information quantities in quantum systems including von Neumann entropy The limits of several kinds of quantum information processing are given As important quantum protocols this book contains quantum teleportation

quantum dense coding quantum data compression In particular conversion theory of entanglement via local operation and classical communication are treated too This theory provides the quantification of entanglement which coincides with von Neumann entropy The next part treats the quantum hypothesis testing The decision problem of two candidates of the unknown state are given The asymptotic performance of this problem is characterized by information quantities Using this result the optimal performance of classical information transmission via noisy quantum channel is derived Quantum information transmission via noisy quantum channel by quantum error correction are discussed too Based on this topic the secure quantum communication is explained In particular the quantification of quantum security which has not been treated in existing book is explained This book treats quantum cryptography from a more practical viewpoint

**The Concept of Nature in Classical German Philosophy** Luis Felipe Garcia,2024-12-02 Classical German Philosophy has traditionally been understood as the period in the history of ideas in which the investigation of the human mind takes precedence over the investigation of the natural world This assessment has a twofold consequence On the one hand the philosophy of the period has been praised for its contributions to our understanding of multiple expressions of human rationality such as history art and religion On the other hand such a philosophy has been criticized for its obscure speculations alien to the standards of modern scientific cognition The philosophy of nature developed at the time has been accordingly dismissed as a piece of outdated metaphysics Challenging this view the contributions collected in this book argue for the historical and contemporary relevance of the approaches to nature formulated at the time

**Powerful Ideas of Science and How to Teach Them** Jasper Green,2020-07-19 A bullet dropped and a bullet fired from a gun will reach the ground at the same time Plants get the majority of their mass from the air around them not the soil beneath them A smartphone is made from more elements than you Every day science teachers get the opportunity to blow students minds with counter intuitive crazy ideas like these But getting students to understand and remember the science that explains these observations is complex To help this book explores how to plan and teach science lessons so that students and teachers are thinking about the right things that is the scientific ideas themselves It introduces you to 13 powerful ideas of science that have the ability to transform how young people see themselves and the world around them Each chapter tells the story of one powerful idea and how to teach it alongside examples and non examples from biology chemistry and physics to show what great science teaching might look like and why Drawing on evidence about how students learn from cognitive science and research from science education the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways Emphasising the important relationship between curriculum pedagogy and the subject itself this exciting book will help you teach in a way that captivates and motivates students allowing them to share in the delight and wonder of the explanatory power of science
