An Inquiry into Science Education, Where the Rubber Meets the Road Richard N. Steinberg, 2012-01-01 An inquiry into science education is an exploration into education in a context that is grounded and significant It is written by a college professor of Physics and Science Education who spent sabbatical year as a full time science teacher in a neighborhood high school in a poor area of New York City His varied experiences highlight the contrast of what science education is and what it can be The framework through which the book is written is that science education should be an active purposeful process which promotes functional understanding and critical thinking Science learners should be given the opportunity to build an understanding of benchmark principals of science based on their own observations and reasoning In much the same way this book explores benchmark principals of science education through real classroom experiences Standard approaches of teaching and assessment are presented and alternative opportunities are described Theories and strategies of science education emerge from analysis of classroom observations Although the focus is on the teaching and learning of science the subtext is implications of a failing educational system and what can be done about it The primary intended audience is educators of all capacities but particularly science teachers An inquiry into science education integrates critical topics of science education in a contextualized accessible and easy to read narrative The secondary intended audience is non fiction readers This book examines educational issues relevant to a general audience from the perspective of a scientist with a focus on inquiry and reasoning Critical issues are addressed through case histories some with touches of humor but all with insight into children and learning

Inside Teacher Education: Challenging Prior Views of Teaching and Learning S.M. Bullock, 2011-07-23 Learning to teach is complex Teacher candidates begin a preservice program with powerful tacit assumptions about how teachers teach based on lengthy apprenticeships of observation over many years as students Virtually all teacher education programs provide a mixture of coursework and classroom experience Much has been written about the theory into practice approach in teacher education an approach that assumes teacher candidates who have been provided with instructions about how to

teach will be able to recall and apply them in a school setting In reality teacher candidates report considerable difficulty enacting theory in practice to the point that many question the value of coursework This book takes an in depth look at five future teachers in one teacher education program analyzing and interpreting how they and their teacher educators learn from experience during both coursework and practicum experiences Many assumptions about the complex challenges of teaching teachers are called into question Is the role of a teacher educator to synthesize research based best practices for candidates to take to their field placements Does the preservice practicum experience challenge or reinforce a lifetime of socialized experiences in schools Must methods courses always be seen by most teacher candidates as little more than sites for collecting resources Where and how do candidates construct professional knowledge of teaching The data illustrate clearly that methods courses can be sites for powerful learning that challenges tacit assumptions about how and why we teach

Learning Science and the Science of Learning Rodger W. Bybee, 2002 Sure you teach science But do your students really learn it Students of all ages will absorb more if you adapt the way you teach to the way they learn That s the message of this thoughtful collection of 12 essays by noted science teachers Based on the latest research this is definitely a scholarly book But to bring theories to life it includes realistic scenarios featuring classrooms where students are encouraged to construct their own science learning These scenarios will give you specific ideas on how to help your students become more reflective about their learning process including what they know what their stumbling blocks are and how to overcome them You ll also examine how to use formative assessment to gauge student learning during the course of a lesson not just at the end *Energy Research Abstracts* ,1989 **El-Hi Textbooks and Serials in Print** ,2003 **Bridging the Gap T/B**
