**3 primary purposes that I need to take into account: (Nemoto, 2014):**

1. To contribute to the development of a theory

→ Student find it difficult to transition to university on a personal and academic level that leads to withdrawal

2. To investigate a phenomena believed to play an important role in education

→ The transition from college to university has an impact on students in their education

3. To develop more effective pedagogies

→ Develop a session for 6<sup>th</sup> form students on transitioning to university for them to have a more realistic view of what to expect

**To pursue these purposes I need to:**

- Use data gathering tools: tests, interviews, protocols, class rom observations and questionnaires
- Ensure the data gathered can be used to make inferences as this is important for validity

exceptional book and one that should be essential reading for anyone seriously thinking about educational practice for two reasons First it is one of the few books on thinking about education which is written with the wit and humour which makes compulsive reading Second the approach to theory or thinking systematically philosophically and evidentially is through the author's own attempt to understand what appears to many as a mystery In this personal journey the author provides a comprehensive and critical review of different theoretical positions Professor Richard Pring University of Oxford What is the role of theory in education Does the pursuit of theory in education always lead to improvements in practice What is the alternative to theory Theory holds a central place in educational inquiry tutors urge students to embed their work in it funding bodies demand that research proposals be located in But in an important new analysis Gary Thomas suggests that the pursuit of theory in education is the pursuit of a chimera This compelling book examines what theory means for both student and researcher and questions whether the confidence in educational theory is justified It begins by looking at what theory is and what use it has in education and examines some theoretically significant influences on educational thought and practice in the twentieth century Challenging the idea that the practice of education should be based on theory the author offers alternative simpler frameworks for conducting inquiry without the constraints of existing theory contending that it is time for a discussion about how values evidence and ideas can more straightforwardly guide educational practice Education and Theory is stimulating reading for academics researchers teachers and students of education **Conducting**
