book addresses readers belonging to various generations such as young people growing up in a world where everything seems to be falling apart people in their 30s and 40s who are thinking about how to live a fulfilling life readers in their 50s and 60s thinking back on life and Baby Boomers reflecting on their past successes and failures

Albert L. Szilard, Robert Gray Dodge Professor of Network Science Northeastern University In a world where interconnectedness has fostered global prosperity it has also introduced vulnerabilities that can escalate local failures into worldwide crises

Feedback by Peter Erdi explores this double edged sword offering a solution through the power of feedback mechanisms These tools are designed to mitigate the negative impacts of connectedness steering the complexity of modern life towards outcomes that enhance human welfare

Patrick Grim, Philosopher in Residence Visiting Scholar Center for Complex Systems University of Michigan Erdi demonstrates that many of the critical problems we face from climate crises to economic instability to the threat of terrorism operate as runaway feedback loops The first challenge is to understand them The second is to introduce control mechanisms on the model of biological homeostasis a different form of feedback that will guide us toward a more sustainable social future

Erdi applies the analytic tools of complex systems to some of the most complex issues we face

Ichiro Tsuda, Specially Appointed Professor at Sapporo City University Sapporo Japan leaving Chubu University Academy of Emerging Sciences Director and Professor Chubu University Japan This book is dangerous because of making your own consideration on feedback impossible to stop by a continual feedback process of yourself Nevertheless you must be given a method of finding very narrow boundaries between prosperity and destruction therefore this book is extremely valuable We all must read

Pacific Conservation Biology, 2009 *American Book Publishing Record* R.R. Bowker Company, 1978 **The Phi Beta Kappa Key** Oscar McMurtrie Voorhees, 1922 **Science and Environmental Decision Making** Mark Huxham, David Sumner, 2000 Science is vital in informing the increasingly urgent and complex environmental decisions that affect all our lives from international agreements on action to limit climate change to decisions on growing genetically modified crops It is clear however that many environmental decisions are taken in the face of scientific uncertainty or ignorance and involve questions of politics and ethics that go beyond science Science alone cannot answer such questions as Are the risks of nuclear power acceptable and Why should we conserve wild species

Science and Environmental Decision Making explores the use and limitations of science in helping to answer environmental questions emphasising the importance of ethics politics and sociology in the decision making process Starting with the question What is meant by a scientific explanation the first three chapters provide a simple introduction to the philosophy and sociology of science and the importance of these fields to environmental scientists They explain the logic of testing ideas in science and look at some of the absolute limits of scientific explanation showing how value judgements inevitably influence scientific work before exploring commercial and political influences on science Chapters 4-10 show how these themes are relevant in case studies ranging from genetic engineering in agriculture to conservation marine eutrophication and the use of models and radiation

protection Each chapter is written by a researcher active in the area and begins with an editorial introduction highlighting the major themes illustrated by the case study This book is aimed at students of ecology environmental science environmental management and geography It will also be useful reading for sociology students who study how the science is applied

China Goes Green Yifei Li,Judith Shapiro,2020-09-01 What does it mean for the future of the planet when one of the world s most durable authoritarian governance systems pursues ecological civilization Despite its staggering pollution and colossal appetite for resources China exemplifies a model of state led environmentalism which concentrates decisive political economic and epistemic power under centralized leadership On the face of it China seems to embody hope for a radical new approach to environmental governance In this thought provoking book Yifei Li and Judith Shapiro probe the concrete mechanisms of China s coercive environmentalism to show how going green helps the state to further other agendas such as citizen surveillance and geopolitical influence Through top down initiatives regulations and campaigns to mitigate pollution and environmental degradation the Chinese authorities also promote control over the behavior of individuals and enterprises pacification of borderlands and expansion of Chinese power and influence along the Belt and Road and even into the global commons Given the limited time that remains to mitigate climate change and protect millions of species from extinction we need to consider whether a green authoritarianism can show us the way This book explores both its promises and risks
