  - b. **How did they, Banting and Best, isolate insulin?** They tied off the pancreatic duct which led to the destruction of digestive juices and not the production of insulin.
  - c. **What were the four experimental procedures they used to identify that insulin was a chemical messenger?** Four experimental procedures are identifying the source of the chemical, identifying the effect to be studied, isolating the chemical, and show that the chemical has the desired effect.
  - d. **How is insulin synthesized today?** Insulin today, is synthesized recombinant DNA technology, using the bacterium *E. coli* to produce the hormone.
