Algebra Falko Lorenz, 2006-07-02 From Math Reviews This is a charming textbook introducing the reader to the classical parts of algebra The exposition is admirably clear and lucidly written with only minimal prerequisites from linear algebra The new concepts are at least in the first part of the book defined in the framework of the development of carefully selected problems Thus for instance the transformation of the classical geometrical problems on constructions with ruler and compass in their algebraic setting in the first chapter introduces the reader spontaneously to such fundamental algebraic notions as field extension the degree of an extension etc The book ends with an appendix containing exercises and notes on the previous parts of the book However brief historical comments and suggestions for further reading are also scattered through the text

Group-Theoretical Methods for Integration of Nonlinear Dynamical Systems Andrei N. Leznov, Mikhail V. Saveliev, 2012-12-06 The book reviews a large number of 1 and 2 dimensional equations that describe nonlinear phenomena in various areas of modern theoretical and mathematical physics It is meant above all for physicists who specialize in the field theory and physics of elementary particles and plasma for mathematicians dealing with nonlinear differential equations differential geometry and algebra and the theory of Lie algebras and groups and their representations and for students and post graduates in these fields We hope that the book will be useful also for experts in hydrodynamics solid state physics nonlinear optics electrophysics biophysics and physics of the Earth The first two chapters of the book present some results from the representation theory of Lie groups and Lie algebras and their counterpart on supermanifolds in a form convenient in what follows They are addressed to those who are interested in integrable systems but have a scanty vocabulary in the language of representation theory The experts may refer to the first two chapters only occasionally As we wanted to give the reader an opportunity not only to come to grips with the problem on the ideological level but also to integrate her or his own concrete nonlinear equations without reference to the literature we had to expose in a self contained way the appropriate parts of the representation theory from a particular point of view
