

CHAPTER 1

Lesson 3: Science Education in the Philippines

Lesson Objectives

At the end of this lesson, the students should be able to:

- discuss the concept of science education; and
- identify science schools establish to promote science education in the Philippines

Introduction

The Philippines is trying its best to improve the state of science education in the country. This lesson will discuss the concept of science education and will identify some strategies to promote science education in the country. One of the strategies is to establish science schools that will encourage students to pursue their career in science and technology and to nurture their gifted potentials in science.

The Concept of Science Education

Science education focuses on teaching, learning, and understanding science. Teaching science involves developing ways on how to effectively teach science. This means exploring pedagogical theories and models in helping teachers teach scientific concepts and processes effectively. Learning science, on the other hand, includes both pedagogy and the most interesting aspect, which is helping students understand and love science. Understanding science implies developing and applying science-process skills and using science literacy in understanding the natural world and activities in everyday life.

Getting deeper into the discourse of science education, John Dewey (2001) stressed the importance of utilizing the natural environment to teach students. Accordingly, nature must indeed furnish its physical stimuli to provide wealth of meaning through social activities and thinking. It is not surprising therefore that science education is important. In fact, Marx (1994) opines that science is going to be one of the most important school subjects in the future.

Science education is justified by the vast amount of scientific knowledge developed in this area that prepares citizens in a scientifically and technologically driven world. Science education provides skills and knowledge that are necessary for a person to live in what Knight (1986) describes as the age of science and to develop
