**Accounting Information Systems** Ada A. Duffey,2024 Small businesses have a significant impact on the economy of the United States Although many small businesses lack resources such as technology integrated computerized accounting information systems ICAIS are accessible An accounting information system AIS can be instrumental in producing financial information for management decision making In addition the ability to automate software called robotic process automation RPA is accessible to small businesses Accounting systems can be automated to more quickly easily and accurately process the data from business transactions and produce financial information In Essay 1 I used the technology organization and environment TOE framework to explain ICAIS adoption by small businesses in the United States I surveyed small business owners using Qualtrics surveys sent out by Centiment a research company The survey asked small business owners about their company s technology infrastructure and compatibility firm size and owner support of ICAIS The survey also asked the small business owners about their perceptions of their customer and vendor willingness and capabilities to interact with an ICAIS The goal was to capture factors that influence adopting an ICAIS In Essay 2 I conducted an experiment with small business owners I hypothesized that small business owners will trust RPA AIS output more when the RPA implementation is conducted by an external accountant versus an internal accountant and the technology readiness TR of owners will positively moderate their trust in automated AIS In addition the difference in trust of the RPA AIS output implemented by an external versus an internal implementer is greater for business owners with low TR than for business owners with high TR Further I expected small business owners are more willing to commit to continuing with the implementation from an external accountant versus an internal accountant after the use of the RPA resulted in data inconsistencies extra monitoring and a higher level of managing exceptions than expected Lastly I predicted owners with high TR will be more likely to continue with the RPA implementation following data inconsistencies extra monitoring and unexpected human intervention than

owners with low TR The research provides insight into small business AIS adoption and RPA implementation      *Accounting Information Systems* Cynthia Heagy, Constance Lehmann, 2020-10-02 In contrast to traditional accounting systems textbooks that assume an organization will develop its own accounting system and therefore emphasize systems development this textbook gives students the theoretical foundation and skills they will need to conduct a requirements analysis search for a commercial solution and successfully implement the software package selected Accounting systems in this textbook are events driven encompassing the capture and processing of all events financial and non financial required to construct the financial reports that are necessary for managing an organization and for meeting its external reporting requirements Special emphasis is given to the reporting requirements of accounting systems as well as control activities typically found in the generic business processes      *Small Business Utilisation of Computerised Accounting Information Systems* Michael John Waymouth, 1998      *Core Concepts of Accounting Information Systems* Stephen A.
