Early Category and Concept Development : Making Sense of the Blooming, Buzzing Confusion David H. Rakison Assistant Professor of Psychology Carnegie Mellon University, Lisa M. Oakes Associate Professor of Psychology University of Iowa, 2003-01-09 Whether or not infants' earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them. At the core of this process and cognitive development in general is the ability to categorize to group events, objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories. Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language. The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities. Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization. Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later? What are the relative roles of perceptual similarity and nonobservable properties in early classification? What is the role of contextual variation in categorization by infants and children? Do different experimental procedures reveal the same kind of knowledge? Can computational models simulate infant and child categorization? How do computational models inform behavioral research? What is the impact of language on category development? How does language partition the world? This book is the first to address these and other key questions within a single volume. The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field. The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization.

Development in the Secondary School Peter Langford, 2016-03-10 Originally published in 1987 this book introduces the reader to work on the intellectual development of adolescents relevant to the secondary school teacher It covers the teaching of English history geography economics politics legal studies physics chemistry biology and mathematics Although it emphasises the continuing importance of Piaget's thought the book aims to introduce readers to the non Piagetian research that had taken place in recent years **Concept Analysis in Nursing** John Paley, 2021-02-15 Concept analysis is an

established genre of inquiry in nursing introduced in the 1970s Currently over 100 concept studies are published annually yet the methods used within this field have rarely been questioned In *Concept Analysis in Nursing A New Approach* Paley provides a critical analysis of the philosophical assumptions that underpin nursing's concept analysis methods He argues provocatively that there are no such things as concepts as traditionally conceived Drawing on Wittgenstein and *Construction Grammar* the book first makes a case for dispensing with the traditional concept of a concept and then provides two examples of a new approach examining the use of hope and moral distress Casting doubt on the assumption that hope always stands for an inner state of the person the book shows that the word's function varies with the grammatical construction it appears in Similarly it argues that moral distress is not the name of a mental state but a normative classification used to bolster a narrative concerning nursing's identity *Concept Analysis in Nursing* is a fresh and challenging book written by a philosopher interested in nursing It will appeal to researchers and postgraduate students in the areas of nursing health philosophy and linguistics It will also interest those familiar with the author's previous book *Phenomenology as Qualitative Research* *The Development of Number Concept in Children of Pre-school and Kindergarten Ages* Harl Roy Douglass, 1925

Technical Abstract Bulletin, 1980 Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a

single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher *The Micro Goes to School* Andria Troutman,James A. White, Frank D. Breit,1988
