Conceptual Questions

(Answers to odd-numbered Conceptual Questions can be found in the back of the book, beginning on page ANS-xx.)

1. What is the direction of the electric current produced by an electron that falls toward the ground?
2. Your body is composed of electric charges. Does it follow, then, that you produce an electric current when you walk?
3. Suppose you charge a comb by rubbing it through your hair. Do you produce a current when you walk across the room carrying the comb?
4. Suppose you charge a comb by rubbing it through the fur on your dog's back. Do you produce a current when you walk across the room carrying the comb?
5. An electron moving through a wire has an average drift speed that is very small. Does this mean that its instantaneous velocity is also very small?
6. Are car headlights connected in series or parallel? Give an everyday observation that supports your answer.
7. Give an example of how four resistors of resistance R can be combined to produce an equivalent resistance of R .
8. Is it possible to connect a group of resistors of value R in such a way that the equivalent resistance is less than R ? If so, give a specific example.
9. What physical quantity do resistors connected in series have in common?
10. What physical quantity do resistors connected in parallel have in common?
11. Explain how electrical devices can begin operating almost immediately after you throw a switch, even though individual electrons in the wire may take hours to reach the device.
12. Explain the difference between resistivity and resistance.
13. Explain why birds can roost on high-voltage wire without being electrocuted.
14. List two electrical applications that would benefit from room-temperature superconductors. List two applications for which room-temperature superconductivity would not be beneficial.

Serway, 2004 Written by John R Gordon Ralph McGrew and Raymond Serway the two volume manual features detailed solutions to 20 percent of the end of chapter problems from the text This manual also features a list of important equations concepts and answers to selected end of chapter questions **Study Guide, Student Solutions Manual** John R. Gordon, 1998 **Handbook of Creativity** John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views Physics James S.
