

Electric Potential due to point charge

$$V = \frac{1}{4\pi\epsilon_0} \frac{Q}{r}$$

Potential difference

$$V_B - V_A = \frac{W_{AB}}{q}$$

$$V_B - V_A = \frac{U_B - U_A}{q}$$

Equipotential Surface

- * Potential is same at all the points of the surface
- * Electric field is always perpendicular to an equipotential surface
- * Work done to move a charge on the equipotential surface is always zero

Electrostatic Potential & Capacitance

Potential due to a dipole

$$\vec{P} = q \times 2\vec{a}$$

$$V = \frac{1}{4\pi\epsilon_0} \frac{P \cos \theta}{r^2}$$

(i) at axial line

$$\theta = 0^\circ, V = \frac{1}{4\pi\epsilon_0} \frac{P}{r^2}$$

(ii) at equatorial line

$$\theta = 90^\circ, V = 0$$

Relation b/w Electric field and potential

$$E = -\frac{dV}{dr} \Rightarrow \Delta V = -\int \vec{E} \cdot d\vec{r}$$

Potential Energy of a dipole

$$U = -PE \cos \theta = -\vec{P} \cdot \vec{E}$$

Work done in rotating a dipole against the torque

$$W_{12} = U_2 - U_1 = -PE [\cos \theta_2 - \cos \theta_1]$$

Potential Energy of a system of two charges

$$U = \frac{1}{4\pi\epsilon_0} \frac{q_1 q_2}{r}$$

Combination of Capacitors

(i) Series $\frac{1}{C_s} = \frac{1}{C_1} + \frac{1}{C_2} + \frac{1}{C_3}$

(ii) Parallel $C_p = C_1 + C_2 + C_3$

Capacitance

(i) Parallel Plate Capacitor

$$C = \frac{K\epsilon_0 A}{d} \quad K \rightarrow \text{dielectric const.}$$

(ii) If a dielectric slab of thickness t ($t < d$) is placed b/w the plates

$$C = \frac{\epsilon_0 A}{\left[\frac{d-t}{K} + \frac{t}{K}\right]}$$

(iii) Spherical Capacitor

$$C = \frac{4\pi\epsilon_0 R_1 R_2}{R_2 - R_1}$$

personal lives and the environment around us Science will have an even greater impact on the lives of our students The lives of scientifically literate students will be enriched by their understanding appreciation and enjoyment of the natural world To prosper in the near future all students must become scientifically literate and embrace the notion of life long learning in science Without scientific literacy it will become impossible for students to make informed decisions about the interrelated educational scientific and social issues that will confront them in the future Intended for science teachers teacher educators researchers and administrators this volume is concerned with the innovative research that is reforming how science is learned in schools The chapters provide overviews of current research and illustrate how the findings of this research are being applied in schools This research based knowledge is essential for effective science instruction The contributors are leading authorities in science education and their chapters draw clear connections among research theory and classroom practice They provide excellent examples from science classes in which their research has reformed practice This book will help educators develop the scientific literacy of students It bridges the gap between cutting edge research and classroom practice to provide educators with the knowledge they need to foster students scientific literacy

The Psychology of Learning Science Shawn M. Glynn, Bruce K. Britton, Russell H. Yeany, 2012-11-12 Focusing on the teaching and learning of science concepts at the elementary and high school levels this volume bridges the gap between state of the art research and classroom practice in science education The contributors science educators cognitive scientists and psychologists draw clear connections between theory research and instructional application with the ultimate goal of improving science teachers effectiveness in the classroom Toward this end explicit models illustrations and examples drawn from actual science classes are included

University of Texas homework delivery systems give instructors flexibility in assigning online homework University Physics Hugh D. Young, Roger A. Freedman, 2000 This work aims to enable students to develop physical intuition and strong problem solving skills In addition it points out the conceptual and computational pitfalls that commonly plague beginner physics students Handbook of Creativity John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views *Concepts of Modern Physics* Arthur Beiser, 1987 Modern Physics is the most up to date accessible presentation of modern physics available The book is intended to be used in a one semester course covering modern physics for students who have already had basic physics and calculus courses The balance of the book leans more toward ideas than toward experimental methods and practical applications because the beginning student is better served by a conceptual framework than by a mass of details The sequence of topics follows a logical rather than strictly historical order Relativity and quantum ideas are considered first to provide a framework for understanding the physics of atoms and nuclei The theory of the atom is then developed and followed by a discussion of the properties of aggregates of atoms which includes a look at statistical mechanics Finally atomic nuclei and elementary particles are examined *Proceedings* American Society for Engineering Education, Society for the Promotion of Engineering Education (U.S.), 1928
