Next year, the State of North Carolina will fully implement the Common Core State Standards (CCSS) in Language Arts and Math, along with 45 other states. There are two main benefits to this.

First, states will begin to standardize curricula and content in these areas, which makes K-12 education common throughout the country. In a nation where people are becoming increasingly mobile as well as increasingly global, common standards give all teachers, students, and parents common goals to reach for each content area and grade level.

Second, the CCSS are designed to prepare students to be proficient in real-world skills of the 21st century. The overarching mission of the CCSS is to prepare students, and therefore communities, to be globally

competitive in the world market of ideas and knowledge.

Charlotte-Mecklenburg Schools is making great strides in fitting course offerings, curricula, and teaching best practices with the

CCSS to make our district the most efficient and productive in the state.

Community House Middle School is at the forefront of progress in aligning standards, curriculum, and teaching practices. With literacy at the core of every curriculum—and with appropriate rigor and real-life application—CHMS is leading the district in preparations and successful benchmarks for this

exciting change.

A major change to come with the new implementation is the format of the new end-of-grade and end-of-course assessments. You can read more about these assessments by following the link on page 4.

The CCSS implementation is a fantastic opportunity to make positive and meaningful strides toward the success of all students as they move toward high school and beyond.

This document is a general statement of how our current program of learning mathematics leads to success against the CCSS and the assessments that will evaluate student progress and proficiency in those standards. It will also point out many ways that the CCSS and Connected Math are the perfect recipe for success.

Math Practice 1: Make sense of problems and persevere in solving them.

Students who are proficient in math are able to approach problems by explaining them and finding the important points that lead to the solution. This includes understanding what the question is, what the important facts are (as well as what facts are not important), organizing a strategic plan, verifying that the plan works, and then evaluating

the solution. An important part of evaluating the solution is asking the question, "Does this make sense?"

Proficient students can see the connections between text, equations, graphs, and tables. They can easily transfer information from one to the other and see changes within them

that make sense of the process of solving the problem.

Finally, as students work, they constantly evaluate their progress toward the solution and make changes as needed in order to reach a logical conclusion.

Developing Mathematical Reasoning Pamela Weber Harris, 2025-02-18 Math is not rote memorizable Math is not random guessable Math is figure out able Author Pam Harris argues that teaching real math math that is free of distortions will reach more students more effectively and result in deeper understanding and longer retention This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long term student growth for short lived gains Students and teachers alike have been led to believe that they ve learned more and more math but in reality their brains never get any stronger Using these tricks may make facts easier to memorize in isolation but that very disconnect distorts the reality of math The mountain of trivia piles up until students hit a breaking point Humanity s most powerful system of understanding organizing and making an impact on the world becomes a soul draining exercise in confusion chaos and lost opportunities Developing Mathematical Reasoning Avoiding the Trap of Algorithms emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning Everyone is capable of understanding and doing real math This book Highlights the important mathematical relationships strategies and models for students to develop Offers personal stories reflection sections and extensive practical exercises for easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math

Mathematical Challenges For All Roza Leikin,2023-03-17 This book argues that mathematical challenge can be found at any level and at every age and constitutes an essential characteristic of any mathematics classroom aimed at developing the students mathematical knowledge and skills Since each mathematics classroom is heterogeneous with respect to students mathematical potential quality mathematical instruction results from matching the level of mathematical challenge to different students potential Thus effective integration of mathematical challenge in the instructional process is strongly connected to the equity principle of mathematics education In the three sections in this volume readers can find diverse views on mathematical challenges in curriculum and instructional design kinds and variation of mathematically challenging tasks and collections of mathematical problems Evidence based analysis is interwoven with theoretical positions expressed by the authors of the chapters Cognitive social and affective characteristics of challenging mathematical activities are observed and analyzed The volume opens new avenues of research in mathematics education and pose multiple questions about mathematical instruction rich in mathematical challenge for all The authors invite readers to explore and enjoy mathematical challenges at different levels

Lessons Learned from Research on Mathematics Curriculum Denisse R Thompson,Mary Ann Huntley,Christine Suurtamm,2024-09-01 This volume focuses on research related to mathematics curriculum But rather than focusing on results of research it focuses on lessons learned about conducting research on curriculum whether about design and development analysis of curriculum in the form of official standards or textbook instantiations teacher intentions related to curriculum implementation or actual classroom enactment For scholars interested in curriculum research the volume offers lessons about conducting curriculum research that have been learned by others engaged in such work including frameworks tools and techniques as well as challenges and

issues faced with solutions to address them Sharing lessons from authors of different countries strengthens the broader mathematics research community and provides insights that can help researchers make important strides forward in research on mathematics curriculum Betrayed Laurie H. Rogers,2011-01-16 In America more money is spent from all sources on K 12 education than on the U S Department of Defense Why then are so many children suffering what amounts to educational malpractice Why are they crippled for life with a substandard education and a life altering vision of themselves as incapable Betrayed is a passionate well researched and frank accounting of how a failing public education system continues to be forced on teachers and students despite its nearly complete lack of supporting research or successful student outcomes Betrayed roots out the self styled stakeholders whose personal professional and financial interests are served by this failing system It sympathizes with teachers many of whom aren t allowed to do their jobs yet are constantly threatened with removal for ineffectiveness or insubordination Betrayed is an expose but it s also a beacon of commonsense and hope Through the Square of Effective Learning Betrayed offers practical methods for teachers parents advocates and legislators to stand up against this broken system to effect positive change and to ensure a good quality education for all of our children
