Yellowstone Cougars Toni K. Ruth, Polly C. Buotte, Maurice G. Hornocker, 2019-09-23. *Yellowstone Cougars* examines the effect of wolf restoration on the cougar population in Yellowstone National Park, one of the largest national parks in the American West. No other study has ever specifically addressed the theoretical and practical aspects of competition between large carnivores in North America. The authors provide a thorough analysis of cougar ecology, how they interact with and are influenced by wolves, their main competitor, and how this knowledge informs management and conservation of both species across the West. Of practical importance, *Yellowstone Cougars* addresses the management and conservation of multiple carnivores in increasingly human-dominated landscapes. The authors move beyond a single species approach to cougar management and conservation to one that considers multiple species, which was impossible to untangle before wolf reestablishment in the Yellowstone area. Provided biologists with this research opportunity, *Yellowstone Cougars* provides objective scientific data at the forefront of understanding cougars and large carnivore community structure and management issues in the Greater Yellowstone Ecosystem as well as in other areas where wolves and cougars are reestablishing. Intended for an audience of scientists, wildlife managers, conservationists, and academics, the book also sets a theoretical precedent for writing about competition between carnivorous mammals.

**Pacific Conservation Biology**, 2008      **Models for Planning Wildlife Conservation in Large Landscapes** Joshua Millsbaugh, Frank R. Thompson, 2009. Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning, the book could be used in studying wildlife habitat models, conservation planning, and management techniques. Additionally, it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations. Additionally, the length of the book would be ideal for graduate student seminar course. Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists. With ever-tightening budgets for wildlife research and planning activities, there is a growing need to use computer methods. Use of simulation models represents the single best alternative. However, it is imperative that these techniques be described in a single source. Moreover, biologists should be made aware of alternative modeling techniques.
