**Basics Materials** Manfred Hegger, Hans Drexler, Martin Zeumer, 2017-05-22 The Materiality of buildings and constructions is an important aspect of

architectural design The approach to and use of materials is a fundamental building block of architectural training Themes Subjective effect of materials Haptic influences Use of materials Creative use of classical construction materials *Basics Timber Construction* Ludwig Steiger, 2020-09-21 Timber is one of the most elementary and oldest building materials used by mankind and has still not lost any of its attractiveness and topicality In many cultural spheres and climate zones the primary construction methods of domestic architecture include both masonry construction and timber construction However this living lightweight and easy to work material has specific characteristics that impact on the way it is used in construction in different ways compared to other building materials In order to develop high quality designs that suit the material architects need to be familiar with the specific characteristics of this building material and with the rules governing timber construction The new edition of the successful *Basics Timber Construction* volume lists the most common solid timber construction systems including that using solid timber wall elements as well as the rules applications and the relevant details *Material Strategies* Blaine Brownell, 2013-07-02 Blaine Brownell's best selling Transmaterial series has introduced designers to hundreds of emergent materials that have the potential to transform our built environment In our new *Architecture Brief Material Strategies* Brownell shows architects how creative applications of these materials achieve such transformations Chapters based on fundamental material categories examine historical precedents current opportunities and future environmental challenges Case studies featuring detailed illustrations showcase pioneering buildings from today's most forward thinking architectural firms **Façades** Ulrich Knaack, Tillmann Klein, Marcel Bilow, Thomas Auer, 2014-09-05 Introduction to building façades as revised edition Façades determine the appearance of a building Hence they constitute a major element in architecture At the same time the building's envelope has important functions to fulfil such as lighting weatherproofing thermal insulation load transfer and sound insulation Over the past 15 years façades have become increasingly complex intelligent façades for instance adapt to changing climate and lighting conditions Newly developed materials and technologies have broadened the scope of façade functions This book demonstrates the principles of façade construction It systematically describes the most common types such as post and beam façade curtain wall corridor façade or double façade and provides guidelines for appropriate detailing Numerous drawings made especially for the book explain the principles of different types of façades which are then illustrated with built examples For this second edition all chapters were revised and all four examples in the case studies chapter were replaced by new material The new chapter Future Façades offers insights into what's next Construction Manual for Polymers + Membranes Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as

an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the Im DETAIL series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library *Facade Construction Manual* Thomas Herzog,Roland Krippner,Werner Lang,2012-12-10 Facades they are the first feature of a building to be noticed they determine its distinctive appearance and are often the subject of controversial debate This new first edition of the *Facade Construction Manual* provides a systematic survey of contemporary expertise in the application of new materials and energy efficient technologies in facade design and represents an invaluable addition to our series of *Construction Manuals* It surveys the facade design requirements made by various types of buildings as well as the most important materials from natural stone through to synthetics and documents a diversity of construction forms for a wide range of building types Over 100 international case studies in large scale detailed drawings are presented in the comprehensive project section *World Architecture* ,2002 **Advanced Architectural Design and Construction** Milan Palko,2016-01-08 Special topic volume with invited peer reviewed papers only *Climate and Architecture* Torben Dahl,2010 Drawing on examples from around the world this book explores the ways in which climate shapes architecture With international case studies the illustrated guide is distinctive in its focus on comfort rather than energy **Encyclopedia of Architectural Technology** Jacqueline Glass,2002-04-03 Constant technological advancements are opening up dramatic new possibilities for the built form at the same time architects are developing innovative designs which require new techniques to make these ideas reality The *Encyclopedia of Architectural Technology* is the first book to specifically address these two issues by providing a comprehensive reference to modern architectural technologies encompassing all key aspects of construction structures environmental design and servicing The *Encyclopaedia* features over 180 entries ranging from materials and techniques to notable innovators in architecture and engineering Each entry includes a brief quick reference summary followed by a more detailed text and suggestions for further reading Besides technological terms entries are included on related topics such as sick building syndrome and sustainability Key engineers Ove Arup and Ted Happold have dedicated entries as do a range of ground breaking architects such as Le Corbusier Norman Foster Walter Gropius Herzog de Meuron Oscar Niemeyer Richard
