Conformal Mapping Zeev Nehari:

Conformal Mapping Zeev Nehari, 1975-01-01 Conformal mapping is a field in which pure and applied mathematics are both involved This book tries to bridge the gulf that many times divides these two disciplines by combining the theoretical and practical approaches to the subject It will interest the pure mathematician engineer physicist and applied mathematician The potential theory and complex function theory necessary for a full treatment of conformal mapping are developed in the first four chapters so the reader needs no other text on complex variables These chapters cover harmonic functions analytic functions the complex integral calculus and families of analytic functions Included here are discussions of Green's formula the Poisson formula the Cauchy Riemann equations Cauchy's theorem the Laurent series and the Residue theorem The final three chapters consider in detail conformal mapping of simply connected domains mapping properties of special functions and conformal mapping of multiply connected domains The coverage here includes such topics as the Schwarz lemma the Riemann mapping theorem the Schwarz Christoffel formula univalent functions the kernel function elliptic functions univalent functions the kernel function elliptic functions the Schwarzian's functions canonical domains and bounded functions There are many problems and exercises making the book useful for both self study and classroom use The author former professor of mathematics at Carnegie Mellon University has designed the book as a semester's introduction to functions of a complex variable followed by a one year graduate course in conformal mapping The material is presented simply and clearly and the only prerequisite is a good working knowledge of advanced calculus

An Introduction to Complex Function Theory Bruce P. Palka, 1991 This book provides a rigorous yet elementary introduction to the theory of analytic functions of a single complex variable While presupposing in its readership a degree of mathematical maturity it insists on no formal prerequisites beyond a sound knowledge of calculus Starting from basic definitions the text slowly and carefully develops the ideas of complex analysis to the point where such landmarks of the subject as Cauchy's theorem the Riemann mapping theorem and the theorem of Mittag Leffler can be treated without sidestepping any issues of rigor The emphasis throughout is a geometric one most pronounced in the extensive chapter dealing with conformal mapping which amounts essentially to a short course in that important area of complex function theory Each chapter concludes with a wide selection of exercises ranging from straightforward computations to problems of a more conceptual and thought provoking nature

Quasiconformal Mappings and Analysis Peter Duren, Juha Heinonen, Brad Osgood, Bruce Palka, 2012-12-06 In honor of Frederick W Gehring on the occasion of his 70th birthday an international conference on Quasiconformal mappings and analysis was held in Ann Arbor in August 1995 The 9 main speakers of the conference Astala Earle Jones Kra Lehto Martin Pommerenke Sullivan and Vaisala provide broad expository articles on various aspects of quasiconformal mappings and their relations to other areas of analysis 12 other distinguished mathematicians contribute articles to this volume
