Sheng S. Li, 2012-12-06 The purpose of this book is to provide the reader with a self contained treatment of fundamental solid state and semiconductor device physics The material presented in the text is based upon the lecture notes of a one year graduate course sequence taught by this author for many years in the Department of Electrical Engineering of the University of Florida It is intended as an introductory textbook for graduate students in electrical engineering However many students from other disciplines and backgrounds such as chemical engineering materials science and physics have also taken this course sequence and will be interested in the material presented herein This book may also serve as a general reference for device engineers in the semiconductor industry The present volume covers a wide variety of topics on basic solid state physics and physical principles of various semiconductor devices The main subjects covered include crystal structures lattice dynamics semiconductor statistics energy band theory excess carrier phenomena and recombination mechanisms carrier transport and scattering mechanisms optical properties photoelectric effects metal semiconductor devices the p n junction diode bipolar junction transistor MOS devices photonic devices quantum effect devices and high speed III V semiconductor devices The text presents a unified and balanced treatment of the physics of semiconductor materials and devices It is intended to provide physicists and materials scientists with more device backgrounds and device engineers with a broader knowledge of fundamental solid state physics **A Direct-translation Reading Aid for the Blind** John G. Linvill, James Charles Bliss, 1965 *Ultrashort Laser Pulses and Applications* Wolfgang Kaiser, 2013-03-14 Ten years ago Stanley L Shapiro edited the book entitled Ultrashort Light Pulses Topics Appl Phys Vol 18 which was written by eight experts in the field Six years later Charles V Shank added a bibliography 1980 1983 in the second edition with approximately one thousand new references During the past decade the field has grown so rapidly that a completely new book had to be written In particular the reduction of the time scale of light pulses into the femtosecond range has opened up new experimental possibilities never even foreseen in the preceding literature The vast literature with countless ideas and applications makes it impossible for a single person to write a comprehensive review Nine scientists actively working in the field since its beginning have decided to join forces to prepare a new book describing the present state of the art Emphasis is placed on the generation and numerous applications of ultrashort laser pulses This book covers a wide area of science physics engineering chemistry and biology The various chapters and sections are prepared in each case such that the reader is given a brief introduction to the specific subject Ample references for a more detailed study are given at the end of each chapter

IEEE Conference Record of 1971 Sixth Annual Meeting of the IEEE Industry and General Applications Group, 1971 **The Physics and Chemistry of Solids**, 1961-12 Adhesion Science and Engineering, 2002-11-14 The Mechanics of Adhesion shows that adhesion science and technology is inherently an interdisciplinary field requiring fundamental understanding of mechanics surfaces and materials This volume comprises 19 chapters Starting with a background and introduction to stress transfer principles fracture mechanics and singularities and an energy approach to debonding the volume continues with analysis of structural lap and butt joint configurations It then continues with discussions of test methods for strength and constitutive properties fracture peel coatings the case of adhesion to a single substrate elastomeric adhesives such as sealants The role of mechanics in determining the locus of failure in bonded joints is discussed followed by a chapter on rheology relevant to adhesives and sealants Pressure sensitive adhesive performance the principles of tack and tack measurements and contact mechanics relevant to wetting and surface energy measurements are then covered The volume concludes with sections on fibermatrix bonding and reinforcement durability considerations for adhesive bonds ultrasonic non destructive evaluation of adhesive bonds and design of adhesive bonds from a strength perspective This book will be of interest to practitioners in the fields of engineering and to those with an interest in adhesion science **Physics of Optoelectronics** Michael A. Parker, 2018-10-03 Physics of Optoelectronics focuses on the properties of optical fields and their interaction with matter Understanding that lasers LEDs and photodetectors clearly exemplify this interaction the author begins with an introduction to lasers LEDs and the rate equations then describes the emission and detection processes The book summarizes and reviews the mathematical background of the quantum theory embodied in the Hilbert space These concepts highlight the abstract form of the linear algebra for vectors and operators supplying the pictures that make the subject more intuitive A chapter on dynamics includes a brief review of the formalism for discrete sets of particles and continuous media It also covers the quantum theory necessary for the study of optical fields transitions and semiconductor gain This volume supplements the description of lasers and LEDs by examining the fundamental nature of the light that these devices produce It includes an analysis of quantized electromagnetic fields and illustrates inherent quantum noise in terms of Poisson and sub Poisson statistics It explains matter light interaction in terms of time dependent perturbation theory and Fermi's golden rule and concludes with a detailed discussion of semiconductor emitters and detectors **Some Aspects of Optical Feedback with Cadmium Sulfide and Related Photoconductors** Stephen J. Katzberg, 1974 **IEEE Conference Record of [the] Annual Meeting** IEEE Industry and General Applications Group, 1971 Solid State Research Lincoln Laboratory, 1996 **Photoconductivity of Solids** Richard H.
