1. In your own words – describe this portion of the experiment by Thomas Hunt Morgan (Fig. 15.3) *Data from T. H. Morgan, Sex-linked inheritance in Drosophila, Science 32: 120–122 (1910).*

Thomas Hunt Morgan's experiment with fruit flies revealed that genes are located on chromosomes. He discovered that the gene for eye color in fruit flies is linked to the sex chromosome, as all white-eyed flies were males. This was a deviation from the expected 3:1 ratio according to Mendel's law of segregation, leading to the understanding of sex-linked traits.
