**Training Design in Aviation** Norman MacLeod, 2017-03-02 Well structured training based on sound theoretical principles can transform the system in which high performance is essential and in turn the organisation Yet the strategic role of cost effective training provision is often less well understood than it might be in all branches of aviation whether civil or regional general business or military This book analyzes the cycle of training design from the identification of requirement through to measurement of effectiveness Key issues in training design and management are illustrated with examples and learning is consolidated through case studies The book provides advice tools procedures and examples of best practice both recent and well established to assist aviation training personnel who aim to guarantee cost effective training The approach is highly practical but does not avoid covering the theory when needed An informative guide to the process of training analysis and course design the book examines each stage of the training design cycle in some depth In addition it looks at the application of quality management and of project management to training design Each chapter contains advice and techniques as well as examples drawn from the author's wealth of experience of training in aviation

principles to plan design develop and implement an e Learning course within an aviation organization and continually evaluate whether or not the course is accomplishing instructional goals A blended learning strategy which incorporates both face to face and computer based instruction is suggested as the most appropriate choice for the majority of aviation companies The goal of this approach is to utilize e Learning as a tool to reduce time at the training centre and thereby increase pilot productivity and potentially improve the quality of training Although the examples within this book focus on pilot training the suggestions and guidelines are applicable to all employee groups within the industry *Boeing 787* Richard L.
