Designing Data Visualizations Representing Informational Relationships Julie Steele:

Designing Data Visualizations Noah Iliinsky, Julie Steele, 2011-09-16 Data visualization is an efficient and effective medium for communicating large amounts of information but the design process can often seem like an unexplainable creative endeavor This concise book aims to demystify the design process by showing you how to use a linear decision making process to encode your information visually Delve into different kinds of visualization including infographics and visual art and explore the influences at work in each one Then learn how to apply these concepts to your design process Learn data visualization classifications including explanatory exploratory and hybrid Discover how three fundamental influences the designer the reader and the data shape what you create Learn how to describe the specific goal of your visualization and identify the supporting data Decide the spatial position of your visual entities with axes Encode the various dimensions of your data with appropriate visual properties such as shape and color See visualization best practices and suggestions for encoding various specific data types *Designing Data Visualizations* Noah Iliinsky, Julie Steele, 2011-09-23 Intentional communication from data to display Cover **Ethics in Design and Communication** Laura Scherling, Andrew DeRosa, 2020-02-20 This timely collection brings together critical analytic historical and practical studies to address what ethics means in the practice of design Designers face the same challenges as everyone else in the complex conditions of contemporary cultural life choices about consumption waste exploitation ecological damage and political problems built into the supply chains on which the global systems of inequity currently balance precariously But designers face the additional dilemma that their paid work is often entangled with promoting the same systems such critical approaches seek to redress how to reconcile this contradiction among others in seeking to chart an ethical course of action while still functioning effectively in the world *Ethics in Design and Communication* acknowledges the complexity of this subject matter while also demonstrating that in the ongoing struggle towards an equitable and sustainable world the talents of design and critical thought are essential Featured case studies include graphic design internships today the dark web and media coverage of the 2016 US presidential election The fact that within this book such a wide array of practitioners scholars critics and professionals commit to addressing current injustices is already a positive sign Nonetheless it is essential that we guard against confusing the coercive force of moral imperatives with ethical deliberation when conceiving a foundation for action *Beautiful Visualization* Julie Steele, Noah Iliinsky, 2010-04-23 Visualization is the graphic presentation of data portrayals meant to reveal complex information at a glance Think of the familiar map of the New York City subway system or a diagram of the human brain Successful visualizations are beautiful not only for their aesthetic design but also for elegant layers of detail that efficiently generate insight and new understanding This book examines the methods of two dozen visualization experts who approach their projects from a variety of perspectives as artists designers commentators scientists analysts statisticians and more Together they demonstrate how visualization can help us make sense of the world Explore the

importance of storytelling with a simple visualization exercise Learn how color conveys information that our brains recognize before we are fully aware of it Discover how the books we buy and the people we associate with reveal clues to our deeper selves Recognize a method to the madness of air travel with a visualization of civilian air traffic Find out how researchers investigate unknown phenomena from initial sketches to published papers Contributors include Nick Bilton Michael E Driscoll Jonathan Feinberg Danyel Fisher Jessica Hagy Gregor Hochmuth Todd Holloway Noah Iliinsky Eddie Jabbour Valdean Klump Aaron Koblin Robert Kosara Valdis Krebs JoAnn Kuchera Morin et al Andrew Odewahn Adam Perer Anders Persson Maximilian Schich Matthias Shapiro Julie Steele Moritz Stefaner Jer Thorp Fernanda Viegas Martin Wattenberg and Michael Young

Design of Visualizations for Human-Information Interaction Kamran Sedig, Paul Parsons, 2022-05-31 Interest in visualization design has increased in recent years While there is a large body of existing work from which visualization designers can draw much of the past research has focused on developing new tools and techniques that are aimed at specific contexts Less focus has been placed

on developing holistic frameworks models and theories that can guide visualization design at a general level a level that transcends domains data types users and other contextual factors In addition little emphasis has been placed on the thinking processes of designers including the concepts that designers use while they are engaged in a visualization design activity In this book we present a general holistic framework that is intended to support visualization design for human information interaction The framework is composed of a number of conceptual elements that can aid in design thinking The core of the framework is a pattern language consisting of a set of 14 basic abstract patterns and a simple syntax for describing how the patterns are blended We also present a design process made up of four main stages for creating static or interactive visualizations The 4 stage design process places the patterns at the core of designers thinking and employs a number of conceptual tools that help designers think systematically about creating visualizations based on the information they intend to represent Although the framework can be used to design static visualizations for simple tasks its real utility can be found when designing visualizations with interactive possibilities in mind in other words designing to support a human information interactive discourse This is especially true in contexts where interactive visualizations need to support complex tasks and activities involving large and complex information spaces The framework is intended to be general and can thus be used to design visualizations for diverse domains users information spaces and tasks in different fields such as business intelligence health and medical informatics digital libraries journalism education scientific discovery and others Drawing from research in multiple disciplines we introduce novel concepts and terms that can positively contribute to visualization design practice and education and will hopefully stimulate further research in this area
