Optimizing the Nation's Investment in Academic Research National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Science, Technology, and Law, Committee on Federal Research Regulations and Reporting Requirements: A New Framework for Research Universities in the 21st Century, 2016-07-29 Research universities are critical contributors to our national research enterprise. They are the principal source of a world class labor force and fundamental discoveries that enhance our lives and the lives of others around the world. These institutions help to create an educated citizenry capable of making informed and crucial choices as participants in a democratic society. However many are concerned that the unintended cumulative effect of federal regulations undercuts the productivity of the research enterprise and diminishes the return on the federal investment in research. *Optimizing the Nation's Investment in Academic Research* reviews the regulatory framework as it currently exists, considers specific regulations that have placed undue and often unanticipated burdens on the research enterprise and reassesses the process by which these regulations are created, reviewed and retired. This review is critical to strengthen the partnership between the federal government and research institutions to maximize the creation of new knowledge and products to provide for the effective training and education of the next generation of scholars and workers and to optimize the return on the federal investment in research for the benefit of the American people.

Selected Block Grants Anthony C. Moretti, 2011 Block grants are a form of grant in aid that the federal government uses to provide state and local governments a specified amount of funding to assist them in addressing broad purposes such as community development, social services, public health or law enforcement. Block grants advocates view block grants as a means to increase government efficiency and program effectiveness by redistributing power and accountability through decentralisation and partial devolution of decision making authority. This book provides an overview of the six grant types, examines competing perspectives concerning the use of block grants versus other grant mechanisms to achieve national goals, provides an historical overview of the role of block grants in American federalism and examines recent changes to existing block grants and proposals to create new ones.
